STATISTICS (STAT)

Chair: Professor N. Rampersad; Professors: M. Ghahramani, S. Hossain; Associate Professors: G. Pokharel, Z. Mashreghi; Assistant Professors: L. Wickramasinghe; Instructors: S. Khan, M. Nasri

DEGREES/PROGRAMS OFFERED

3-Year BA 3-Year BSc 3-Year BSc (Business Stream) 4-Year BA 4-Year BSc (Business Stream) 4-Year BSc (Business Stream) 4-Year BSc (Data Science Stream) Minor

INTRODUCTION

Statistics is the science of data collection, summarization, analysis, and interpretation. A central issue of statistics is how to make inferences about populations of interest, using data obtained from samples or designed experiments. Statistical techniques are applied extensively in virtually every branch of the physical, social, biological, and human sciences. Statistical methodologies and principles of inference are based heavily upon statistical theory, which, in turn has an essential underlying mathematical foundation. Computer software is typically used for statistical analysis of large data sets.

The Statistics Department offers 3-Year and 4-Year BA or BSc degree programs. Students pursuing a 4-year BSc or BA in Statistics have the opportunity to take a Data Science Stream. Students pursuing a 3-year or 4-year BSc in Statistics also have the opportunity to take a Business Stream (see the "Science with a Business Stream" section of this Course Calendar).

As a student of Statistics, one may study theoretical statistics and probability theory, which focuses on the logical development of statistical methods. One may also take courses which focus on the application of statistical methodology to data sets from a variety of disciplines. The Statistics Department also offers courses in simulation, operations research, and stochastic modeling.

Students who are not Statistics majors will find that a background in statistics is valuable in many areas. Students considering graduate study in various fields may benefit from many of our applied courses. For some programs, certain Statistics courses are required. An understanding of statistical concepts is important for numerical literacy.

Statisticians often work collaboratively with specialists in other fields to develop methodologies and analyze data for research studies. They may assist economists in the analysis of consumer prices, or with the design and analysis of large-scale socioeconomic surveys. Statisticians may help biologists, chemists and engineers in the design and analysis of experiments, or work with medical researchers to test the effectiveness of new drugs. They may also work with researchers in fields such as agriculture, anthropology, climatology, education, epidemiology, and geography. Other opportunities can be found in finance, marketing, and quality management. Many statisticians find employment with private corporations and government agencies, including Statistics Canada.

REQUIREMENTS FOR A 3-YEAR BA/BSc IN STATISTICS

ADMISSION REQUIREMENT	students must consult with a member of the Department in planning their course of study.	
GRADUATION REQUIREMENT	90 credit hours	
RESIDENCE REQUIREMENT Degree: Major:	Minimum 30 credit hours Minimum 18 credit hours	
GENERAL DEGREE REQUIREMENT		
Humanities:	12 credit hours in Humanities	
Writing:	3 credit hours of Academic Writing	
Maximum Introductory Courses:	Students may use a maximum of 42 credit hours at the 1000 level. Of these, a maximum of 6 credit hours may be below the 1000 level. As a result, students must take a minimum of 48 credit hours at the 2000-level or above in order to not exceed the maximum number of introductory courses.	
Distribution:	Minimum three (3) credit hours from each of five (5) different subjects.	

MAJOR REQUIREMENT

Single Major Double Major Minimum 30 credit hours/Maximum 48 credit hours. Minimum 30 credit hours in Statistics and specified number of credit hours in the other department/program.

Required Courses: Core Courses	Statistical Analysis I <u>OR</u> Statistics I for Business and Economics <u>OR</u> Elementary Biological Statistics I Statistical Analysis II <u>OR</u> Elementary Biological Statistics II Survey Sampling I Mathematical Statistics I or the former STAT/MATH-3611 Statistical Computing I Applied Regression Analysis Analysis of Variance and Covariance Mathematical Statistics II Introduction to Calculus <u>OR</u> Introduction to Calculus I <u>AND</u> Introduction to Calculus I Linear Algebra I Intermediate Calculus II	
credit hours from:	Business and Management Statistics Intermediate Biological Statistics Nonparametric Statistics Introduction to Mathematical Finance Statistics for Epidemiology or the former STAT-3701 Applied Multivariate Methods Time Series and Forecasting Survey Sampling II Introduction to Operations Research Simulation
