Psychology is the scientific study of the mind, human experience, and behaviour, ranging from the basic mechanisms of the nervous system to principles governing social relations.

Psychology seeks to understand scientifically such diverse topics as aggression, attachment between infants and caregivers, reading, psychological disorders, romantic relationships, and effective behaviour in organizations. These and other topics are examined from multiple perspectives, including basic biological processes, early environment, the impact of poverty and other stressors, social context, and culture.

Students are encouraged to select courses from various areas that make up its core: physiological psychology, perception, learning, cognition, developmental psychology, personality, social psychology, and abnormal psychology. Students also take courses on the scientific methods that psychologists use to understand human behaviour and experience, from observations and surveys to biological procedures. Outside of class, students have opportunities to participate in psychological research, to work with faculty on specific research projects, and to attend interesting talks.

This program leads to a Bachelor of Arts degree (3-year, 4-year, or Honours). The 4-year Honours degree is recommended for anyone planning to go on to graduate studies in the field.

Also, please see related fact sheet on “Neuroscience.”

SAMPLE CAREERS

A background in Psychology is useful in most workplaces, as knowledge about motivation, perception, learning, social behavior and data analysis can be applied on a regular basis. Psychology courses are often part of training programs or are prerequisites for degrees in areas such as nursing or medicine, education, speech pathology, law enforcement, social services, business, and public administration. The 4-year Honours degree in Psychology provides excellent preparation for graduate programs, which can lead to careers in research, academia or clinical practice.

SAMPLE COURSES

Introductory Psychology provides an overview of the scientific analysis of behaviour and mental activity from biological, social, and personal perspectives. The course surveys diverse psychological topics, including perception, learning, memory, intelligence, personality, developmental processes, and abnormal behaviour.

Social Psychology I is a second-year course that explores the behaviour and cognition of the individual in social contexts. Topics include social perception and impression formation, attitudes, beliefs and values, prejudice and discrimination, and the formation and function of the social self.

Biological Considerations in Clinical Psychology is an Honours course that deals with the biological bases of several psychological disorders. In the course, students also discuss and compare
various psychotherapeutic and pharmacological treatments. Topics include such disorders as anorexia nervosa, alcoholism, mania, depression, phobias, obsessive-compulsive disorder, schizophrenia, Parkinsonism, and Alzheimer’s disease.

MORE SAMPLE COURSES

- Abnormal Behaviour in Adults
- Developmental Psychology
- Drugs and Behaviour
- Forensic Psychology
- Perception
- Introduction to Clinical Psychology

SAMPLE FIRST YEAR

PSYC-1000(6) Introductory Psychology
RHET-1102(3) Academic Writing: Social Sciences or any other section of Academic Writing (if required)
21-24 credit hours of Electives, depending on interests

NOTE: This sample first year is only representative of courses students might take. For many programs, students may choose an alternative set of courses and still be well on their way to a degree. Also, most programs do not require that students take 30 credit hours (five full courses) in first year.

“The Psychology program at UWinnipeg has provided me with many unique opportunities. The hands-on experience of working with faculty members in their labs has granted me the privilege of conducting my own research and presenting at one of the largest social and personality psychology conferences in the world. All of these opportunities have made me a desirable candidate for a variety of Master’s programs and have opened up a world of possibilities for my future studies.”

Alesha Frederickson, BA Honours 2018

REQUIRED HIGH SCHOOL COURSES

Students must meet The University of Winnipeg’s general admission requirements. No specific courses are required for registration in Introductory Psychology.

HOW TO APPLY
