Country and region information contained in this report is based upon MFS classification methodology which may differ from the methodology used by individual benchmark providers.

Portfolio characteristics are based on equivalent exposure, which measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ.

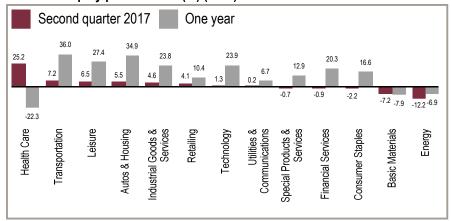

Market overview

Global Equity performance (%) (CAD) as of 30-Jun-17

Source: FactSet. Region performance based on MSCI regional/country indexes.

Canadian Equity performance (%) (CAD) as of 30-Jun-17

Source: FactSet. Sector performance based on MFS sector classification. The analysis of TSX Composite Index constituents are broken out by MFS defined sectors.

Second quarter 2017 Global Equity market review

- While global equity markets have continued to rally amidst historically low volatility in 2017, overall global growth and inflation remain subdued. Value, procyclical and energy/commodity-related areas have lagged in recent months while companies with a secular growth orientation exhibited leadership as reflationary expectations have faded.
- Despite some positive earnings growth and revisions, profits are accelerating faster than revenues and capital expenditures remain soft. Valuations appear stretched by historical measures but not at extreme levels.
- With the Federal Reserve having already raised short-term rates twice in 2017, and global central banks potentially shrinking their balance sheets in the next few years, interest rates may face upward pressures. However, we believe long rates will likely be contained in a lower range relative to history, given our views of weak long-term growth and inflation.

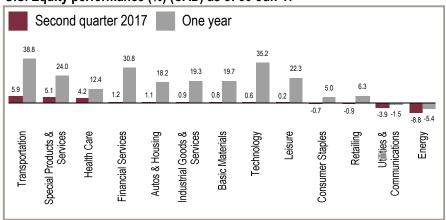

Second quarter 2017 Canadian Equity market review

- The Canadian equity market traded down modestly this quarter, contrasting gains for most other markets around the globe in local currency terms.
- The Canadian decline contrasted domestic economic data as well; Canada's GDP was up 3.7% annualised in Q1, strongest among the G7 developed nations.
- Sector performance was mixed: financials, energy and materials were down in the quarter while the rest of the market gained.
- The sector dichotomy points towards underlying macro currents during the period. The
 price of oil was persistently weaker dragging energy names down materials and
 commodity stocks generally followed along. The financial stocks felt the cooling impact
 of interest rates retracing mid-quarter, threatening margins and their earnings outlooks.

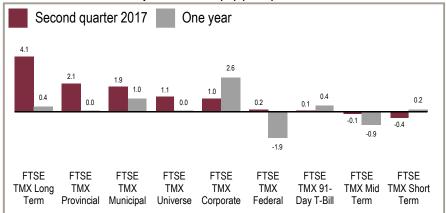

Market overview

U.S. Equity performance (%) (CAD) as of 30-Jun-17

Source: FactSet. Sector performance based on MFS sector classification. The analysis of S&P 500 Index constituents are broken out by MFS defined sectors.

Canadian Fixed Income performance (%) (CAD) as of 30-Jun-17

Second quarter 2017 U.S. Equity market review

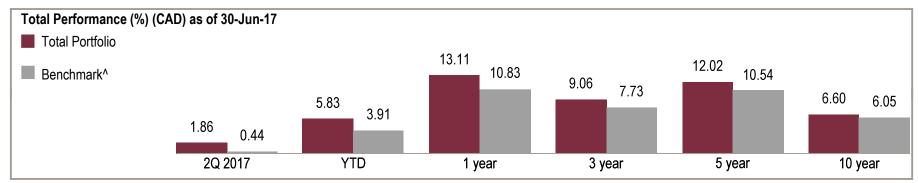

- The US market, as measured by the S&P 500 Index, continued to move upward
 throughout the second quarter, although at a slower pace than in Q1. Investors are
 watching the political landscape closely, taking note of the president's economic agenda
 and interest rate hikes from the US Federal Reserve and seeking to determine whether
 better year-over-year earnings growth will persist and support equity valuations, which
 have increased with the recent market run-up.
- US economic growth (GDP) slowed from last quarter, with a final reading of 1.4% for Q1.
 Even with this slowdown, the expectation of fiscal stimulus in 2017 and the desire for a
 normalised federal funds rate incented the Fed to raise interest rates in June. And while
 interest rate moves are data dependent, most Fed officials see at least one more
 increase in 2017.
- The growth style of investing continued to outperform the value style of investing in Q2, despite a small reversal of this trend in June. The outperformance for the quarter was driven mostly by a stronger relative return from the industrial sector versus weaker relative returns from the consumer staples and utilities sectors. In addition, large caps modestly outperformed small caps during the quarter.

Second quarter 2017 Canadian Fixed Income market review

- The Government of Canada yield curve flattened significantly during the quarter, rising nearly 30 basis points in the short end of the curve and falling over 15 basis points in terms longer than 10 years.
- Canadian corporate spreads ended the quarter slightly tighter mainly due to
 communication and infrastructure bonds. We continue to prefer credit given the
 current backdrop of slow but non-recessionary global growth, but we are
 increasingly selective as the credit cycle continues to mature and many credit
 spreads appear fully valued.
- The Bank of Canada again maintained its policy rate at 0.50%. Recent data has
 given the Bank of Canada enough ammunition to make the case for raising rates
 and the market is now pricing in two hikes for 2017.

Asset summary

Asset allocation as of 30-Jun-17

MFS' asset mix view

The "reflation trade" showed signs of faltering in the second quarter. While global economic growth remained solid, signs of inflation have failed to emerge, and activity has fallen short of the elevated expectations in the immediate aftermath of the US election. We are seeing signs that global growth momentum may be fading, and prospects for US fiscal stimulus and tax reform continue to dim. While we believe global economic growth may continue in the near term, we are not as optimistic about a sustained period of better activity that would likely mark a material breakout in global bond yields and corporate pricing power.

As the second quarter was coming to a close, several major central banks shifted to a more hawkish tone and appeared eager to signal that the era of ultra-loose monetary policy is coming to an end. The shift is likely a result of renewed optimism over the growth outlook and, in the absence of meaningful inflation pressures, concerns over financial stability. The US Federal Reserve appears likely to continue to increase interest rates and is expected to begin balance sheet normalisation while the European Central Bank is expected to taper its quantitative easing toward the end of the year. Late in the quarter, the Bank of Canada surprised markets by also communicating a more hawkish tone and caused the market to price in a 50 basis point increase in rates this year. We continue to believe that sustained low growth and inflation, demographic trends, and high levels of indebtedness will likely be constraints on central banks' ability to raise rates significantly in the future and to keep the overall level of bond yields lower for longer. Amid full valuations in asset prices at a time of slowing economic momentum and less accommodative policies, we continued to reduce risk by trimming equity exposure to neutral. Within fixed income we continued to reduce allocations to corporate bonds as credit spreads have narrowed to overvalued levels. In other words, as asset valuations have crept higher, risk premia in equities and credit have continued to decline, and we have reduced exposure because we feel the risk of growth disappointing the optimistic consensus view has increased. We remain modestly underweight Canadian equities versus global equities as uncertainty around commodity prices and macro trends suggests that the Canadian credit cycle is in its late stages.

The MFS portfolio's quality breakdown is based on MFS' own methodology, which is different from that used by the benchmark provider. MFS has not independently verified the benchmark data. For all securities other than those specifically described below, ratings are assigned to underlying securities utilizing ratings from Dominion Bond Rating Service (DBRS), Standard and Poor's, Moody's Investors Service, and Fitch rating agencies. In cases where the agencies do not agree on the credit rating, the rating is classified according to the following rules If two agencies rate a security, and the ratings are not equal, use the lower of the two ratings; if three agencies rate a security, use the most common rating; In the rare event that all three agencies disagree, use the middle rating. If four agencies rate a security with a two way split, use the lower rating. In the highly unlikely event that all four agencies disagree, consider the three lower ratings applying the three rating methodology rule. Ratings are shown in the S&P and DBRS scale (e.g., AAA). All ratings are subject to change. U.S. Government includes securities issued by the U.S. Department of the Treasury. Federal Agencies includes rated and unrated U.S. Agency fixed-income securities, U.S. Agency MBS, and CMOs of U.S. Agency MBS. Other Not Rated includes fixed income securities which have not been rated by any rating agency, and cash.

¹ The Average Credit Quality (ACQR) is a market weighted average (using a linear scale) of securities included in the rating categories.

² (Lesser of Purchase or Sales)/Average Month End Market Value
