Country and region information contained in this report is based upon MFS classification methodology which may differ from the methodology used by individual benchmark providers.

Portfolio characteristics are based on equivalent exposure, which measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ.

Third quarter 2017 Global Equity market review

- Global equity markets have continued to advance amidst historically low volatility. Valuations appear stretched by historical measures but not at extreme levels.
- With some modest improvements in economic and earnings growth globally, growth has outperformed value and emerging markets have outperformed developed markets in 2017. However, overall global growth and inflation remain below long-term trends.
- As global central banks appear to transition gradually toward a more neutral policy stance and begin to remove liquidity from the system, interest rates may face upward pressures. However, we continue to believe that long rates will likely be contained in a lower range relative to history, given our views of subdued long-term growth and inflation.

Third quarter 2017 Canadian Equity market review

- The Canadian equity market ended the quarter on a positive note, rising by 3.7% (S&P/TSX Capped Composite) which puts it in the middle of the pack relative to equity markets across the globe in local currency terms.
- However, the path to quarterly gain was anything but smooth as the market was virtually unchanged during the months of July and August, trailing most of its global peers.
- Two developments driving the September upturn included: 1) a second interest rate hike by the Bank of Canada on stronger-than-expected economic data and 2) a rebound in oil prices, in part reflecting hurricane-related supply shortages. These factors acted as catalysts for strength in financial and energy stocks, comprising the two largest sectors in Canada.
- As a result, market leadership was unusually narrow during the period, where apart from aforementioned financial and energy names, consumer discretionary was the only other outperformer – all other sectors fell short of the benchmark return.

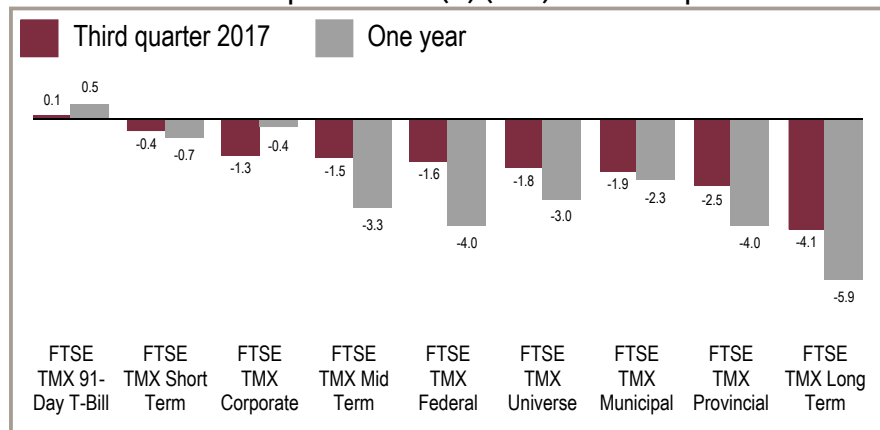

Market overview

U.S. Equity performance (%) (CAD) as of 30-Sep-17

Source: FactSet. Sector performance based on MFS sector classification. The analysis of S&P 500 Index constituents are broken out by MFS defined sectors.

Canadian Fixed Income performance (%) (CAD) as of 30-Sep-17

Third quarter 2017 U.S. Equity market review

- The US market, as measured by the S&P 500 Index, continued to move upward throughout the third quarter, accelerating its pace from Q2. Despite no progress on the president's economic agenda, the future unwinding of the US Federal Reserve's balance sheet, significant geopolitical concerns and major hurricanes hitting the US, investors have pushed the S&P 500 Index to an all-time high.
- US economic growth (GDP) increased from last quarter with a final reading of 3.1% for Q2. A strong labour market and consumer spending were key factors in this pickup of growth. And while the Fed did not raise interest rates this fall, the market is expecting one more increase at the end of the year.
- The growth style of investing continued to outperform the value style of investing in Q3, despite value's relative improvement in September. Growth's outperformance for the quarter was driven mostly by a persistent stronger relative return from the technology sector versus weaker relative returns from the utilities and real estate sectors. In addition, small caps modestly outperformed large caps during the quarter, which was a reversal from the first six months of the year.

Third quarter 2017 Canadian Fixed Income market review

- The Government of Canada yield curve rose significantly over the course of the quarter with yields for most terms rising 30-40bps as a result of the Bank of Canada raising rates twice during the quarter.
- Canadian corporate spreads ended the quarter modestly tighter – mostly due to short-dated industrial bonds. We continue to prefer credit given the current backdrop of slow but non-recessionary global growth, but we are increasingly selective as the credit cycle continues to mature and many credit spreads appear fully valued.
- Two consecutive hike decisions by the Bank of Canada have doubled their policy rate to 1.00%. Despite this, market expectations indicate an additional two rate hikes are priced in by the end of next year.

Asset summary

Asset allocation as of 30-Sep-17

MFS' asset mix view

The global economy continues to exhibit solid — and apparently increasingly broad-based — growth, which has been fairly rare in the post-financial-crisis period. At the same time, inflation remains contained. Though price pressures are no longer falling, inflation continues to undershoot both investor expectations and central bank targets. As a result, ultra-easy global monetary policies are being tightened ever so gradually. In this environment, global equity markets have continued to advance amid historically low volatility, and global long-term interest rates remain low — though they moved higher in the third quarter after falling in the Q2. Leading indicators point to continued moderate global growth, with few threats of imminent recession. However, valuations in risky assets such as equities and credit sectors in fixed income have moved higher, suggesting lower risk premia and the prospect of lower future returns.

We remain neutral on equities within our balanced portfolios, with the positive environment of ongoing solid economic and earnings growth largely offset, in our view, by full valuations and tighter liquidity conditions as policy rates rise, the US Federal Reserve reduces its balance sheet and the likelihood increases that the ECB will soon begin to taper its quantitative easing actions. Regionally, we remain modestly underweight Canadian equities versus global equities given uncertainty around commodity prices, macro trends suggest the Canadian credit cycle is in its late stages and an overshoot of recent Canadian dollar strength which we see reversing. We continue to believe that bonds will outperform cash within fixed income. While corporate bonds are expensive, we do not see an imminent widening in spreads, so carry remains attractive. At the same time, the recent rise in Canadian bond yields on the back of Bank of Canada tightening looks overdone. Though yields are unlikely to fall significantly anytime soon, expectations of BoC tightening look excessively priced-in, and as a result Canadian government bonds have regained their value.

Significant impacts on performance – detractors

Relative to S&P/TSX Capped Composite Index (CAD) - third quarter 2017

		Relative contribution (%)
Basic Materials		-0.3
	Stock selection within this sector detracted from relative performance.	
	Intertape Polymer Group Inc	-0.2
	An overweight position in shares of packaging products manufacturer Intertape Polymer Group (Canada) hampered relative performance. Although the company's earnings results were in line with market consensus, its shares fell on a reduced forward earnings guidance.	
	Ccl Industries Inc	-0.2
	Shares of labels producer CCL Industries (Canada) hampered relative performance. Despite robust quarterly results, the stock came under pressure as management raised caution regarding recent increases in input commodity (polypropylene resin) pricing and a stronger Canadian dollar, which devalues CCL's significant offshore earnings.	
Retailing		-0.2
	Stock selection within this sector detracted from relative performance. However, there were no individual shares within this sector that were among the portfolio's top relative detractors for the reporting period.	
Energy		-0.2
	Stock selection within this sector detracted from relative performance.	
	Advantage Oil & Gas Ltd	-0.2
	A portfolio overweight to holdings of Canadian oil & gas producer Advantage Oil & Gas Ltd weighed on relative returns as the stock underperformed the benchmark during the period. Reported quarterly cash flow per share and total production numbers missed consensus estimates, while higher-than-expected operating expenses impacted the bottom line.	
Individual stocks		-0.2
	Boardwalk Real Estate Trust	-0.2
	An overweight position in real estate investment trust Boardwalk Real Estate Investment Trust (Canada) held back relative results. The company lowered its full-year guidance following delays in its suite renovation program, which is taking longer to complete than initially budgeted.	
	Canadian Pacific Railway Ltd	-0.1
	The portfolio's position in transcontinental railway operator Canadian Pacific Railway (Canada) detracted from relative performance. Quarterly results were in line with market expectations, however, conservative guidance cited subdued volume growth expectations (weather) and continued uncertainty related to crude oil price and transport volumes. The strong Canadian dollar was also unhelpful as the company generates significant US dollar revenue.	

Significant impacts on performance – contributors

Relative to S&P/TSX Capped Composite Index (CAD) - third quarter 2017

		Relative contribution (%)
Financial Services		0.1
	Stock selection within this sector contributed to relative performance.	
	Dream Office Real Estate Investment Trust	0.1
	Holdings of Dream Office Real Estate Investment Trust (Canada), comprising a diverse portfolio of office properties across Canada, aided relative performance. The stock traded higher as the company completed roughly double the expected level of asset dispositions over the recent 18 months versus management's original three-year goal. The remaining high-graded portfolio is now underpinned by a stronger balance sheet, including \$300 million in cash.	
Utilities & Communications		0.1
	Stock selection within this sector contributed to relative performance. However, there were no individual shares within this sector that were among the portfolio's top relative contributors for the reporting period.	
Transportation		0.1
	Stock selection within this sector contributed to relative performance.	
	Air Canada	0.2
	The portfolio's overweight position in shares of airline company Air Canada (Canada) aided relative results. The stock appreciated after the company reported quarterly results that beat earnings estimates, driven by strong revenue and cost reduction strategies. Management also raised its outlook for margin expansion, return on invested capital (ROIC) and free cash flow, which further supported the stock.	
Individual stocks		
	Suncor Energy, Inc	0.2
	An overweight position in Canadian integrated energy provider Suncor Energy contributed to relative returns as the stock outperformed the benchmark during the quarter. Crude oil prices trended upward during the quarter, from a low of around \$45 to a high of around \$50. The company also completed a sizeable share repurchase program which further benefited the stock.	
	Canadian Natural Resources Ltd	0.1
	An overweight position in independent crude oil and natural gas company Canadian Natural Resources (Canada) helped relative returns. The company posted strong results owing to high production volumes at its Athabasca Oil Sands Project (AOSP) and Horizon site. This resulted in better-than-expected free cash flow that improved its balance sheet surplus.

Portfolio outlook and positioning

Back in April, MFS® announced important changes to the MFS Canadian equity product lineup. Guided by the marketplace, we conducted a thorough review of our suite of actively managed Canadian equity strategies and have taken steps to better align our investment capabilities and resources with the long-term needs of Canadian asset owners. As a result of this review, the MFS Canadian Equity Value strategy has transitioned its investment philosophy and process and has become the MFS Low Volatility Canadian Equity strategy. The portfolio transition was completed as of September 29, 2017. As such, the following commentary reflects the key portfolio repositioning changes, as well as the outlook of the MFS Low Volatility Canadian Equity investment team.

Before we address the key repositioning changes, a quick reminder of the investment approach of the MFS Low Volatility Canadian Equity strategy can serve as a useful frame of reference. The strategy targets lower volatility than the S&P/TSX Capped Composite Index and a reduction in downside risk that aligns with a defensive equity philosophy. The same investment team behind MFS' current suite of low-volatility strategies, spanning US, international and global markets, has assumed portfolio management responsibilities. Jim Fallon is the lead portfolio manager on the strategy and is supported by the broader MFS Blended Research investment team.

Looking at the portfolio repositioning changes, the overlap level between the two strategies was at 48.4%, as of August 31, with the following key changes observed across sectors and industries during the month of September:

- Holdings in financial services were reduced by -9.4% primarily driven by a reduction in position sizes of major banks. Most notably we reduced our exposure to such names as TD Bank, Bank of Nova Scotia, and Royal Bank of Canada. Other notable reductions included Fairfax Financial Holdings (insurance), Element Fleet Management (diversified financials), and Manulife Financial (insurance).
- We also witnessed a meaningful reduction to basic materials and transportation. In basic materials, the decrease was primarily the result of outright sells or a significant reduction in a number of precious metals and mining companies including Agnico Eagle Mines, Tahoe Resources, First Quantum Minerals and Barrick Gold Corporation. Additionally, eliminations of container companies CCL Industries and Intertape Polymer Group accounted for the bulk of our reduction to basic materials. Within transportation, decreasing exposure to the railroad and shipping industry (elimination of Canadian Pacific Railway) led to the overall decrease in the sector.
- Lastly, we reduced our overall exposure to the energy sector driven by a cut to Canadian National Resources and the elimination of independent energy companies Cenovus Energy and Crescent Point Energy

Portfolio outlook and positioning

On the opposite side of the spectrum, the following sector allocations witnessed notable increases:

- Utilities and communications saw their weights increase as we initiated positions in Emera (electric power) and BCE (telephone services) along with meaningful increases to previous holdings Rogers Communications (wireless communications), TELUS Corporation (telephone services), and Just Energy Group (electric power).
- We also increased our exposure to retail on the back of increased exposure to Alimentation Couche-Tard (food and staples retailing) and Loblaw Companies (food and staples retailing) as well as a new position in Dollarama (general merchandise).
- Leisure rounds out the most significant increases, where we initiated positions in Shaws Communications (media) and increased our exposure to Thomson Reuters (print/publishing).

With these changes, as of September 30, 2017, the portfolio was most overweight utilities, special products and services, and retail versus the S&P/TSX Capped Composite Index, while most underweight financial services, transportation and basic materials.

As it relates to the overall low-volatility asset class, while investors may currently be expressing optimism with the continued strength in economic indicators, and renewed confidence resulting from the recent wins by political centrists in Europe and continued benign monetary policy, significant geopolitical risks and near-peak economic data should tilt leadership more towards growth, quality and, ultimately, defensives.

Against this backdrop of political, economic and market uncertainties, we believe that remaining true to our investment approach — which avoids the most volatile stocks, has a longer-term focus and identifies high-quality companies trading at attractive valuations using both MFS' proprietary fundamental research and quantitative research insights — is prudent. Additionally, understanding and managing the risk exposures in the portfolio construction process, given these potential risks to continued positive investor sentiment and strong market performance, is also vital. While we do not anticipate making any changes to our investment approach or the strategic composition of the portfolio, we are continuously monitoring and reviewing our process, and we remain confident that your patience in our investments will be rewarded over time.

Further, we believe that over the long term, these changes put us in a stronger position to deliver competitive results based on the unique needs of our clients, and we look forward to discussing them with you in more detail. Thank you for your continued confidence in MFS.

The commentary included in this report was based on a representative fully discretionary portfolio for this product style; as such the commentary may include securities not held in your portfolio due to account, fund, or other limits.

Significant impacts on performance – detractors

Relative to MSCI All Country World Index (CAD) - third quarter 2017

		Relative contribution (%)
Consumer Staples	An overweight position in Consumer Staples detracted from relative performance as the sector underperformed the broad market over the quarter.	-0.6
General Mills Inc	The portfolio's overweight position in shares of global food company General Mills (United States) weighed on relative performance following weaker-than-expected quarterly results with sales and gross margins coming in below estimates. The negative share price reaction appeared to reflect heightened market sensitivity to concerns over the sustainability of packaged food industry revenues and margins.	-0.2
Altria Group Inc	An overweight position in shares of US-based tobacco company Altria Group held back relative performance as shares fell after the Food and Drug Administration (FDA) announced its plan to lower the amount of nicotine in cigarettes to non-addictive levels.	-0.2
Financial Services	Stock selection within this sector detracted from relative performance.	-0.5
Validus Holdings Ltd	The portfolio's holdings in shares of Bermudan insurance services provider Validus Holdings Ltd weighed on relative returns as the stock underperformed the benchmark during the quarter. The stock price followed its property and casualty insurer peers downward in early September, as they assessed damages incurred by Hurricanes Harvey and Irma.	-0.2
Avalonbay Communities Inc	The portfolio's overweight position in shares of real estate investment trust (REIT) AvalonBay Communities (United States) hindered relative performance. The company's results fell shy of market estimates, dampened by general and administrative and operating expenses. A downgrade in guidance for funds from operations, further weighed on the stock.	-0.2
Technology	Stock selection within this sector detracted from relative performance. However, there were no individual shares within this sector that were among the portfolio's top relative detractors for the reporting period.	-0.4
Individual stocks		
Integra Lifesciences Holdings Corp	The portfolio's position in shares of medical instruments manufacturer Integra Lifesciences (United States) detracted from relative performance on the back of weaker-than-expected organic growth. Management blamed the miss mainly on slower Dural Repair growth, owing to increased price discounting and the loss of several Integrated Delivery Networks (IDN) accounts to HyperBranch.	-0.3
Kia Motors Corp	The portfolio's overweight position in automobile manufacturer Kia Motors (South Korea) weighed on relative returns during the quarter. Shares declined as the company lost a wage litigation case brought by its labour union. As a result of the ruling, the company will need to pay 420 billion won for a pay period covering 2008 through 2011. The ruling is believed to make the company more likely to have to pay out on similar pending wage dispute cases covering the period 2012 to present.	-0.3
Abc-Mart Inc	The portfolio's overweight position in shares of apparel and footwear retailer ABC-Mart (Japan) held back relative returns as the stock underperformed the benchmark during the period. Operating profits for the first quarter were down year-over-year, notably due to a decline in operating profits in Japan and South Korea.	-0.2

Significant impacts on performance – contributors

Relative to MSCI All Country World Index (CAD) - third quarter 2017

			Relative contribution (%)
Individual stocks	Ross Stores Inc	The portfolio's overweight position in shares of apparel retailer Ross Stores (United States) helped relative returns. Shares of Ross jumped as growth in same-store sales and improving merchandise margins drove second-quarter earnings ahead of market expectations. The strong results appeared to help alleviate concerns about the growth of off-price merchandise and inroads into apparel by Amazon.com.	0.1
	PTT Global Chemical	The portfolio's overweight position in biochemical products producer PTT Global Chemical (Thailand) helped relative performance. Shares advanced, despite weakness in its Olefins and Aromatic segments, as tax savings, an insurance claim and favourable forex helped offset these divisions.	0.1
	Lockheed Martin Corp	The portfolio's overweight position in shares of defence contractor Lockheed Martin (United States) added to relative returns as second-quarter earnings beat consensus estimates and management raised its full-year guidance. An improving environment for defence spending appeared to have provided a favourable backdrop for many defence contractors.	0.1
	Fisher & Paykel Healthcare C	Owning shares of healthcare company Fisher & Paykel (New Zealand) benefited relative performance. The stock continued its climb higher after management reiterated its profit guidance for the fiscal year of \$180-\$190 million New Zealand dollars, despite experiencing unexpected currency headwinds. Investors appeared to have viewed this positively.	0.1
	Marine Harvest Asa	The portfolio's overweight position in shares of seafood company Marine Harvest (Norway) aided relative results. The company posted better-than-expected earnings owing primarily to strong performance in the Consumer Products segment. Additionally, a higher dividend helped support the share price.	0.1

Portfolio outlook and positioning

Global equities advanced steadily higher in Q3, shrugging off hurricane disasters in the United States and the Caribbean islands, escalated rhetoric between President Trump and Kim Jong Un and failures of the Republican Senate to advance the Trump agenda with two failed attempts to repeal and replace Obamacare.

Performance during the quarter was broadly led by cyclical geographies and sectors supported by an above-average earnings outlook, continued economic strength and generally stimulative monetary policies. Having said that, mega caps and large caps outperformed mid and small caps, while growth, with a few exceptions, outperformed value, both more indicative of defensive leadership.

More specifically, from a geographic perspective, performance, in local currency terms, was led by emerging markets, with particularly strong performance in Latin America, China and Russia. The European and Japanese markets were generally in line with ACWI, as was the US market, which is generally regarded as a more defensive geography. Markets in the United Kingdom and Pacific ex Japan underperformed during the quarter. On a sector basis, leadership was primarily in late-cycle sectors such as basic materials, energy and technology. Utilities and telecom, both yield-sensitive sectors, lagged during the quarter, impacted by the backup in bond yields. Further, the stable growth and more defensive staples and health care sectors significantly underperformed. Despite the cyclical leadership of global markets, style performance was more mixed, with growth outperforming value in the US and emerging markets, while value outperformed growth in European and developed Asian markets.

Valuations on an absolute basis remain elevated versus history in the US and Europe and generally in line with long-term averages in most other major geographies. On a relative basis, the US and Europe are expensive, while Japan and emerging markets are cheap. Based on P/E ratios only, large caps are more attractively valued than small caps, while growth stock valuations are in line with long-term averages versus value stocks.

Turning to the earnings outlook, the most recent estimate-revisions data remain supportive of further global equity market advances, with Japan having the strongest trend of upward versus downward revisions, while Europe and emerging markets have weaker trends. On a relative basis, estimate revision trends for EAFE and emerging markets are improving while US trends are deteriorating.

Finally, despite elevated geopolitical risks, volatility globally remains subdued. Prolonged periods of low VIX readings are not uncommon and go hand-in-hand with low credit spreads and persistently higher equity markets. Based on a study by Ned Davis (10/03/2017), the mean number of days without a 100% and 150% rise in the VIX is 306 and 449, respectively. For context, the current low VIX readings have surpassed 482 days.

Given the environment outlined above, it is not surprising that the MFS Low Volatility Global Equity portfolio lagged the MSCI All Country World Index in the third quarter. Given the portfolio's strategy of selecting attractively valued, high-quality stocks from a universe that excludes the highest volatility stocks, it will struggle in an

Portfolio outlook and positioning

environment that is dominated by lower-quality, cyclical and higher-volatility stocks. At the same time, the backup in interest rates globally has also been a significant headwind; historical periods of rising rates have generally produced strong absolute results for lower-volatility and higher-quality stocks, but weak relative results.

Further examination of the results shows that the intersection holdings, which are stocks deemed attractive by both of our proprietary research sources, produced weak results, as did stock selection by each research source independently. With the quality focus of our fundamental research team, this outcome aligns with the low-quality leadership we are experiencing in most markets globally. Further, with the least-volatile quintile of global stocks currently priced at a premium to the overall market, the ability of our quantitative model, which is designed to identify attractively valued stocks with good earnings quality and an investment catalyst, has been challenging.

Key trades for the quarter included:

- During the period, we initiated a position in US-based global food and beverage company PepsiCo, as we view the company as attractively valued relative to other consumer staples companies. Additionally, the company benefits from one of the strongest food franchises in the US, led by its Frito-Lay brand, which we believe should help the firm to continue to deliver durable profit growth. Quantitatively, the stock benefits from strong earnings quality and earnings momentum scores.
- In addition to our purchase of PepsiCo, we also added to existing holdings in ABC-Mart, Altria Group, Terumo Corporation and TELUS Corporation.
- During the period, we took the opportunity to add to our position in Japan-based shoe retailer ABC-Mart. While not necessarily a high-growth business model, the company does benefit from high and stable return on invested capital. Additionally, the company has a history of meeting earnings expectations and delivering healthy and consistent free cash flow. More recently, the stock has exhibited short-term relative weakness, which we took advantage of to increase position size. We also took advantage of short-term weakness to add to our holding in Altria Group. Altria's stock reacted to declining volumes after California, where the company has significant exposure, increased excise taxes on cigarette purchases. However, the firm was able to partially offset the impact on earnings through increased pricing and share repurchases. From a quantitative perspective, the stock appears favorable across price momentum, earnings quality and sentiment.
- We continued to add to our position in Japan-based medical supplier Terumo Corporation during the third quarter. Fundamentally, we have a positive outlook on management's five-year plan, which aims to target steadier growth and margin recovery while focusing on areas in which they believe they possess an innovative edge. From a quantitative perspective, the stock benefits from strong earnings momentum.

Portfolio outlook and positioning

- And finally, we added to our holding in Canadian-based telecommunications company TELUS. TELUS is our preferred Canadian telecom operation due to its ability to deliver high single-digit growth in earnings and free cash flow. Additionally, the firm posted larger than expected net wireless additions, along with increased average revenue per user in the most recent quarter.
- On the sell side, we eliminated a number of positions including DBS Group Holdings and Pinnacle Foods while paring existing positions in General Mills and McDonalds.
- We sold our position in DBS Group Holdings, a Singapore-based company engaged in a range of commercial banking and financial services, particularly in Asia. Increased volatility, coupled with heightened valuation on the back of relatively strong performance for over a year, drove our decision to sell our stake in the company. Further, from a fundamental standpoint, we have less conviction in the company's ability to improve results enough to justify current valuations. In the case of Pinnacle Foods, a US-based manufacturer and marketer of branded convenience food products, the decision to sell was mainly driven by concerns around current valuations. Fundamentally, we are concerned that the stock will face increasing pressure from growing competition, particularly from private label brands, which may reduce future pricing power. We trimmed shares of global food company General Mills on concerns the company has underestimated the long-term impact of e-commerce on their business model. Additionally, the company continues to face downward pressure on several categories, including dough as well as cereal and yogurt. As it relates to our position in McDonalds, we pared our holding on concerns around increased valuation following management's ability to execute on improving the menu (breakfast items and healthier options) as well as expansion.

Looking on the bright side, the current period of low volatility, while not unprecedented in duration, is clearly above average based on the Ned Davis study referenced above. Further, in looking at past rising-rate environments in both the US and globally, the current backup in rates is past the halfway point of historical averages. Last, the portfolio has a more robust diversification approach than passive peers as well as a more disciplined valuation approach, which positions it to benefit investors with a long-term investment horizon.

It is unclear when this period of low-quality, high-volatility leadership will end; however, with leading economic indicators seemingly in a topping process, it would be normal for growth stocks to resume their leadership trend despite the significant differential in performance versus value stocks year to date. While the valuations of growth and high-quality stocks look expensive versus history, investors typically afford stable growth and defensives premium valuations as the economy slows. While investors may be expressing optimism with the continued strength in economic indicators, renewed confidence resulting from the recent wins by political centrists in Europe and continued benign monetary policy, significant geopolitical risks and near-peak economic data should tilt leadership more toward growth, quality and, ultimately, defensives.

Portfolio outlook and positioning

Against this backdrop of political, economic and market uncertainties, we believe that remaining true to our investment approach — which avoids the most volatile stocks, has a longer-term focus and seeks to identify high-quality companies trading at attractive valuations, using both MFS' proprietary fundamental research and quantitative research insights — is prudent. Additionally, understanding and managing the risk exposures in the portfolio construction process, given these potential risks to continued positive investor sentiment and strong market performance, is also vital. While we do not anticipate making any changes to our investment approach or the strategic composition of the portfolio, we are continuously monitoring and reviewing our process, and we remain confident that your patience in our investments will be rewarded.

Significant impacts on performance

Relative to FTSE TMX Canada Bond Universe Index - third quarter 2017

Contributors	Security selection in industrials and financials	Security selection in industrial and financial bonds contributed to returns, particularly the portfolio's preference for non-Canadian issues.
	Sector allocation	A preference for corporate bonds, particularly industrial bonds, over federal government bonds bolstered performance as corporate spreads tightened over the course of the quarter.
	Overweight of BBB and BB	An overweight allocation to BBB- and BB-rated credit also added value as spreads tightened more in lower quality bonds than higher quality.
Detractors	There were no material detractors during the period

Credit quality (% of total assets) as of 30-Sep-17

[^] FTSE TMX Canada Bond Universe Index

¹ The Average Credit Quality (ACQR) is a market weighted average (using a linear scale) of securities included in the rating categories.

² (Lesser of Purchase or Sales)/Average Month End Market Value

The MFS portfolio's quality breakdown is based on MFS' own methodology, which is different from that used by the benchmark provider. MFS has not independently verified the benchmark data. For all securities other than those specifically described below, ratings are assigned to underlying securities utilizing ratings from Dominion Bond Rating Service (DBRS), Standard and Poor's, Moody's Investors Service, and Fitch rating agencies. In cases where the agencies do not agree on the credit rating, the rating is classified according to the following rules: If two agencies rate a security, and the ratings are not equal, use the lower of the two ratings; if three agencies rate a security, use the most common rating; in the rare event that all three agencies disagree, use the middle rating. If four agencies rate a security, use the most common rating; if four agencies rate a security with a two way split, use the lower rating. In the highly unlikely event that all four agencies disagree, consider the three lower ratings applying the three rating methodology rule. Ratings are shown in the S&P and DBRS scale (e.g., AAA). All ratings are subject to change. U.S. Government includes securities issued by the U.S. Department of the Treasury. Federal Agencies includes rated and unrated U.S. Agency fixed-income securities, U.S. Agency MBS, and CMOs of U.S. Agency MBS. Other Not Rated includes fixed income securities which have not been rated by any rating agency, and cash.

Portfolio outlook and positioning

The Canadian bond market returned -1.84% in the third quarter, reducing the year-to-date return to 0.48% after two quarters of positive returns. Our core economic views have not changed this quarter. We continue to expect moderate non-recessionary global growth with low inflation and on-going headwinds from excess debt. We do not expect US tax reform to meet current optimistic expectations in terms of timing and impact on growth. We also believe trade rhetoric is a potential headwind, particularly to Canada where US exports are roughly 25% of Canadian GDP.

We continue to expect credit to outperform over the course of the cycle, though many credits are looking fully valued. While we don't anticipate a recession or a major default cycle, which would lead to a blow-out in spreads, it is difficult to see a material spread narrowing from current levels. As a result we trimmed the provincial allocation given outperformance as the credit cycle has matured with proceeds deployed into federals. Nevertheless, we remain overweight credit given still positive carry and we remain focused on bonds of issuers with strong cross-cycle fundamentals. Right now we see opportunities in US industrials and financials.

Early in the quarter, the Bank of Canada surprisingly began to communicate a more hawkish stance, and twice raised rates. The market has now priced in an additional 50 basis point increase in rates by the end of 2018. Given the low level of inflation, high level of consumer debt and recent softening of housing activity, we are concerned about the potential negative impact of rising interest rates on the Canadian economy. Our duration-neutral position has limited the negative impact of the rise in yields this quarter.

The commentary included in this report was based on a representative fully discretionary portfolio for this product style; as such the commentary may include securities not held in your portfolio due to account, fund, or other limits.
