Country and region information contained in this report is based upon MFS classification methodology which may differ from the methodology used by individual benchmark providers. Portfolio characteristics are based on equivalent exposure, which measures how a portfolio's value would change due to price changes in an asset held either directly or, in the case of a derivative contract, indirectly. The market value of the holding may differ.

Market Overview

Global Equity performance (%) (CAD) as of 30-Sep-20

Source: FactSet. Region performance based on MSCI regional/country indexes.

Canadian Equity performance (%) (CAD) as of 30-Sep-20

Source: FactSet. Sector performance based on MSCI sector classification. The analysis of TSX Composite Index constituents are broken out by MSCI defined sectors.

Third quarter 2020 Global Equity market review

- The global equity market has retreated since early September, as investors reassess stock valuations and economic conditions following a strong rebound propelled by unprecedented stimulus policies and partial reopening of economies.
- The market's concentration in high-valuation large technology stocks remains a concern despite their recent pullback.
- A number of uncertainties may impact the sustainability of economic recovery going forward, including concerns about a second wave of COVID-19 infections, availability and timing of vaccines, additional stimulus, US elections, etc.

Third quarter 2020 Canadian Equity market review

- Volatility continued during the quarter as the impact of the COVID-19 slowdown made for mixed assessments. Early strength followed the second-quarter rebound but gave way to a modest pullback in the final month as signs of a pandemic resurgence emerged in parts of Canada and around the world.
- Canadian equities (S&P/TSX Capped Composite) rose 5% in the quarter, bringing year-to-date to 3% and the one-year price performance back to unchanged. Canada's performance in Q3 lagged US equities, as is the case year to date, both periods reflecting Canada's higher proportion of energy stocks and lower proportion of technology.
- Sector performance for the quarter varied across the segments of the market, with industrials, materials and utilities posting the strongest gains. Conversely, the energy complex endured another weak quarter, declining by 8%.
- During the quarter, one-year forward consensus earnings estimates for the S&P/TSX were revised up nearly 5%, but this was off the low base, with estimates having been slashed in excess of 20% in Q2. The net impact is that bottom-up estimates for 2021 are now expected to be about back even with the 2019 level. The benchmark forward price earnings multiple moved down to 17.4x versus more than 20x in the prior quarter and compares to the 5-year average of around 15.7x and the 10-year average of about 15x.

Market Overview

U.S. Equity performance (%) (CAD) as of 30-Sep-20

Source: FactSet. Sector performance based on MSCI sector classification. The analysis of S&P 500 Index constituents are broken out by MSCI defined sectors.

Third quarter 2020 U.S. Equity market review

- The US market, as measured by the S&P 500 Index, moved higher in Q3, despite a pullback in September. Volatility increased that month with the market selloff as investors continued to worry about COVID-19 and the upcoming US presidential election.
- Economic growth in the US plunged during Q2, with GDP of -31.4%. As expected, this negative record rate was driven by a global shutdown due to the coronavirus. Economic activity is forecast to move significantly higher in Q3, as the US and many economies worldwide have at least partially reopened. The US Federal Reserve has pledged to keep interest rates near zero until the economy heals from the pandemic.
- For the quarter, growth outperformed value in the large-, mid-, and small-cap spaces, although large cap value outperformed large-cap growth in September. In general, the market continued to reward stocks most likely to benefit from increased consumer and business activity due to states reopening their economies. During Q3, the best-performing sectors were consumer discretionary, materials and industrials. Energy, real estate and financials were the weakest sectors on a relative basis.

Canadian Fixed Income performance (%) (CAD) as of 30-Sep-20

Source for benchmark performance SPAR, FactSet Research Systems Inc. All indices represent total return unless otherwise noted.

Third quarter 2020 Canadian Fixed Income market review

- The Canadian fixed income market, as measured by the FTSE Canadian Universe Bond Index, returned 0.44% during the third quarter. Positive performance reflected a modest tightening of credit spreads with corporate bonds outperforming federals and provincials.
- Within corporates, BBBs outperformed the higher quality A and AA segments. From an industry perspective real estate, industrials and financials outperformed the broader corporate index. Infrastructure, communications and energy lagged.
- The key theme influencing capital markets was the massive "wall of money" provided by global central banks. This resulted in strong demand for Canadian corporate bonds helped push credit spreads tighter. The strong technical backdrop offset outstanding risks such as concerns of a second surge of virus infections, commodity price weakness, global trade tensions, the upcoming U.S. presidential election and tight valuation levels.

Asset Summary

Asset Mix view as of SEP-30-20

The global economy rebounded strongly in Q3 after a historic COVID-19– induced contraction in the second quarter. Supported by unprecedented monetary and fiscal support, economies globally reopened. However, re-opening and the associated mobility brought with it renewed waves of virus cases forcing authorities to either roll back planned reopenings or take health risks in the name of economic growth.

On the policy front, some fiscal support measures either expired or were paired back while the thrust of monetary policy faded somewhat. In other words, largest policy impact is probably behind us and any further action will most likely be incremental at best. Risk markets traded more off of policy and election uncertainty than the macro data – equity returns were muted in Q3 versus Q2, similar to high-yield and investment-grade returns in fixed income markets.

We remain somewhat cautious on global equities, with allocations close to neutral levels versus benchmarks. Equity valuations have risen, tied at the hip to the "wall of money" policymakers have thrown at the system. However, we believe volatility will increase in the coming months, as the "wall of worry" remains alive and well and there is little margin of safety in risk asset valuations. We believe we'll get a better opportunity to add equity exposure by remaining patient: The macro backdrop remains far too fragile in our view to support higher valuations in equities or credit.

While we do believe more stimulus is inevitable, markets have discounted this, and policymakers will, as usual, be late and likely respond to market signals rather than lead. Within our neutral equity targets, we have maintained the preference for foreign exposure at the expense of the domestic equity market, while the fixed income allocation is overweight bonds at the expense of cash.

¹ Sector allocation is calculated based upon each security's price in local currency.

² Stock selection is calculated based upon each security's price in local currency and included interaction effect. Interaction effect is the portion of the portfolio's relative performance attributable to combining allocation decisions with stock selection decisions. This effect measures the relative strength of the manager's convictions. The interaction effect is the weight differential times the return differential.

Attribution results are generated by the FactSet application utilizing a methodology that is widely accepted in the investment industry. Results are based upon daily holdings using a buy-and-hold methodology to generate individual security returns and do not include fees or expenses. As such, attribution results are essentially estimates and do not aggregate to the total return of the portfolio, which can be found elsewhere in this presentation. To obtain the contribution calculation methodology and a complete list of every holding's contribution to the overall portfolio's performance during the measurement period, please email DLaAttributionGrp@MFS.com.

Portfolio Outlook and Positioning

The Low Volatility Canadian Equity strategy modestly outperformed the S&P/TSX Composite Index in the third quarter of 2020.

Contributors

- Quantitative models — quality, price momentum
- Volatility allocation
- Stock selection within communication services
- Underweight to health care

Detractors

- Fundamental research
- Stock selection within information technology and industrials
- Quantitative models — earnings momentum

Performance review

After the tumultuous first half of 2020, including record market moves in both directions as unprecedented government intervention served to mitigate the severity of the COVID-19 impact, the third quarter, by comparison, reflected a return to some sense of normalcy. Canadian equities (S&P/TSX Composite) rose, reducing the year-to-date price decline and are now roughly flat on a year-over-year basis. Canadian markets lagged US equities in Q3 and ranked mid-pack among global peers. Year-to-date 2020, Canadian equities also lagged those in the US, reflecting Canada's higher proportion of energy stocks and lower proportion of information technology stocks.

Benchmark sector outperformance favored cyclicals in the quarter with industrials, consumer discretionary and materials all handily outperforming. Defensives, with the exception of utilities, lagged during period with particular weakness in the health care sector. Financials, which continued to track interest rates, slightly underperformed, while energy stocks continued to track energy prices and significantly underperformed.

45753.3

Portfolio Outlook and Positioning

The volatility experienced in the past year has propagated significant shifts in the S&P/TSX Index weights. The gold subindex has nearly tripled in the past year, from scraping the bottom end of the two-decade floor at low single digit exposure a year ago to the current low double digit exposure level. The gold index weight last peaked in 2011 at 14%. The S&P/TSX Technology sector benchmark weight has nearly doubled in the past 6 months, moving from mid-single digit at year-end 2019 to the current double digit level. Technology was barely represented in the index in September of 2012, and much of the gains have come at the expense of the energy sector, which represents just over 10% after representing nearly a third of the index in 2008.

Factor performance continued to be narrow and led by growth, price momentum and quality. Value performance continued to lag, however, the traditionally defensive yield factor modestly outperformed with notable gains during the September market correction. Volatility increased in the final month of the quarter, benefitting the low-volatility factor. Market cap performance continue to skew smaller-cap with the S&P/TSX equal-weighted composite outperforming the capitalization-weighted benchmark since the March bottom.

The outcome of the research input performance described above was offset by stock selection challenges from the fundamental inputs, especially within the technology and industrials sectors. The headwind from value factors continues to be persistent, especially as the correlation between value and price momentum is at extremely historic levels. On the positive side, allocation to lower-volatility stocks paid off, which did not hold across the globe. In addition, allocation to higher-quality and higher-price momentum factors were effective within the Canadian market.

Portfolio positioning

Improving economic and earnings data, coupled with broadly supportive fiscal and monetary policy, should support the evolving rotation towards cyclical sectors, such as industrials and discretionary. Historically a rotation to cyclicals tends to favor value, beta and size (small) factors, however all business/market cycles aren't exactly alike. Value factor performance has been uncharacteristically weak, which is not that surprising given the uneven recovery.

The current market environment which is dominated by growth and momentum stocks continues to challenge our investment process and the performance of your portfolio. Our investment process, which consists of a diversified combination of fundamental factors and research processes, coupled with a risk controlled portfolios construction process, is designed to produce consistent relative returns through most

45753.3

Portfolio Outlook and Positioning

market environments. As we have communicated in the past, the most challenging market environment for our process is one in which a single factor/style or a limited group of stocks dominate performance.

The commentary included in this report was based on a representative fully discretionary portfolio for this product style; as such the commentary may include securities not held in your portfolio due to account, fund, or other limits.

¹ Sector allocation is calculated based upon each security's price in local currency.

² Stock selection is calculated based upon each security's price in local currency and included interaction effect. Interaction effect is the portion of the portfolio's relative performance attributable to combining allocation decisions with stock selection decisions. This effect measures the relative strength of the manager's convictions. The interaction effect is the weight differential times the return differential.

Attribution results are generated by the FactSet application utilizing a methodology that is widely accepted in the investment industry. Results are based upon daily holdings using a buy-and-hold methodology to generate individual security returns and do not include fees or expenses. As such, attribution results are essentially estimates and do not aggregate to the total return of the portfolio, which can be found elsewhere in this presentation. To obtain the contribution calculation methodology and a complete list of every holding's contribution to the overall portfolio's performance during the measurement period, please email DLaAttributionGrp@MFS.com.

Portfolio Outlook and Positioning

The Low Volatility Global Equity strategy underperformed the MSCI ACWI Index in the third quarter of 2020.

Detractors

- Intersection holdings
- Valuation factors
- Underweight most volatile stocks
- Underweight consumer discretionary sector

Contributors

- Underweight energy and financials sectors
- Momentum factors

Market Environment

The third quarter of 2020 saw equity markets complete the fastest trough-to-peak recovery of a major market selloff going back to the 1970s. Against the backdrop of a strong market recovery, the most volatile stocks led the way, making it especially difficult for the Low Volatility Global Equity strategy to keep pace. The characteristics of outperforming stocks tended to be higher volatility, strong price momentum, and strong top line growth. Companies with business models that proved to be pandemic/stay-at-home beneficiaries mainly found within the consumer discretionary and information technology sectors, also outperformed.

Regional performance was narrow for the quarter overall with the US and emerging Asian markets outperforming significantly. Cyclical sectors dominated in the third quarter, led by consumer discretionary stocks, which continued to benefit from strength in online retailers. Defensives sectors, such as consumer staples, utilities and health care, lagged in the developing bifurcated cyclical rotation. Factor performance remained narrow and with a few exceptions, was led by growth, price momentum and quality globally.

It is important to note the significant rotation that occurred during the September selloff. Regionally, the US market underperformed significantly, weighed down by a significant pullback in US technology and media leaders, while Japan, Europe and emerging markets all outperformed the broader benchmark. On a sector basis, leadership shifted to more defensive sectors with utilities, health care and

45752.3

Portfolio Outlook and Positioning

consumer staples all outperforming. Factor performance also experienced a significant reversal, with the low volatility factor benefitting from a shift away from momentum and growth stocks.

Portfolio Performance

The US detracted the most on the quarter relative to MSCI ACWI, as information technology and consumer discretionary led the way in a high-volatility market. Japan was the second worst country for relative contribution, driven by the communication services sector. Emerging markets was the best contributing region, driven by selection within Taiwan. From a sector perspective, selection within communication services and consumer discretionary detracted the most, while information technology selection (driven mainly by Taiwan) was the most additive.

An overweight to lower-volatility stocks detracted from relative performance on the quarter, as the most volatile stocks outperformed during the rally off of the market bottom, which began at the end of the first quarter. Value factors also continued their underperformance, but showed the beginning of a rebound toward the end of the quarter as high flying technology sold off. Both quality and price momentum posted strong performance on the quarter.

Outlook

The current market environment, which is dominated by a concentrated group of mega-cap growth and momentum stocks, continues to challenge our investment process and the relative performance of your portfolio. Our investment process, which consists of a diversified combination of fundamental factors and research processes coupled with a risk controlled portfolio construction process, is designed to outperform over a full market cycle. The historically fast rebound of equity markets off the bottom in March has been driven by historically more volatile sectors and companies, which is common for equity market rebounds, and is the within the distribution of expected outcomes when exposed to low volatility.

The rapid selloff of many mega-cap growth stocks in September, coupled with the emerging leadership of industrials and materials stocks and strong performance of value factors, provides a lens into relative positive performance when the market comes up for air. Although it is

Portfolio Outlook and Positioning

unclear what the catalyst for change will be, there are a number of events in progress and on the horizon that could drive improving market breadth and reduce stock and factor correlations, both of which should benefit our investment process and portfolio performance.

CERTIFICATE OF PORTFOLIO COMPLIANCE

MFS Low Volatility Global Equity Fund

To the best of my knowledge, for the quarter ending September 30, 2020, MFS Investment Management Canada Limited ("MFS") complied in all material respects with the investment restrictions contained in the applicable Offering Memorandum or Offering Memoranda for the MFS Low Volatility Global Equity Fund. Such certification is subject to the following conditions: (i) MFS' compliance testing is performed using portfolio valuation reports derived from its internal security inventory system and not the books and records of the Portfolio; and (ii) MFS is responsible for compliance with the investment restrictions as stated in the applicable Offering Memorandum or Offering Memoranda.

MFS Investment Management Canada Limited.

Significant Impacts on Performance

Relative to FTSE Canada Universe Bond Index - third quarter 2020

Contributors	Asset allocation	An overweight to investment grade and high yield corporates and securitized while being underweight federals was a sizable contributor. Overweights to industrials, financials and energy helped. Increasing the overweight to BBBs during the period added.
	Security selection	Selection within financials, industrials, securitized and provincials helped. Positioning within banks and insurance added. Owning high yield industrials added. Positioning within CMBS helped. Being overweight Alberta and Manitoba while underweight Ontario was additive.
Detractors	Yield curve positioning	Being underweight the short-term part of the yield curve hurt.

The commentary included in this report was based on a representative fully discretionary portfolio for this product style; as such the commentary may include securities not held in your portfolio due to account, fund, or other limits.

Credit quality (% of total assets) as of 30-Sep-20

The MFS portfolio's quality breakdown is based on MFS' own methodology, which is different from that used by the benchmark provider. MFS has not independently verified the benchmark data.

For all securities other than those specifically described below, ratings are assigned to underlying securities utilizing ratings from Dominion Bond Rating Service (DBRS), Standard and Poor's, Moody's Investors Service, and Fitch rating agencies. In cases where the agencies do not agree on the credit rating, the rating is classified according to the following rules: If two agencies rate a security, and the ratings are not equal, use the lower of the two ratings; if three agencies rate a security, use the most common rating; In the rare event that all three agencies disagree, use the middle rating. If four agencies rate a security, use the most common rating; If four agencies rate a security with a two way split, use the lower rating. In the highly unlikely event that all four agencies disagree, consider the three lower ratings applying the three rating methodology rule. If none of the 4 Rating Agencies above assign a rating, but the security is rated by DBRS Morningstar, then the DBRS Morningstar rating is assigned. Ratings are shown in the S&P and DBRS scale (e.g., AAA). All ratings are subject to change. U.S. Government includes securities issued by the U.S. Department of the Treasury. Federal Agencies includes rated and unrated U.S. Agency fixed-income securities, U.S. Agency MBS, and CMOs of U.S. Agency MBS. Other Not Rated includes fixed income securities which have not been rated by any rating agency.

Portfolio Outlook and Positioning

Market Review

There was a meaningful improvement in economic activity during the third quarter as the impact of COVID-19 lockdowns lessened. High frequency data such as mobility, public transit usage and restaurant activity increased from a near standstill in the spring. The combination of pent up demand and fiscal stimulus measures boosted consumer spending. Spending was skewed towards tangible goods such groceries, electronics and home improvement items. Meanwhile, service segments of the economy such entertainment, restaurants and airlines continued to be weak.

The key theme influencing capital markets was the unprecedented "wall of money" provided by global central banks. The U.S. Federal Reserve, European Central Bank and Bank of Japan have all implemented monetary facilities that are multiple times larger than those deployed during the 2008 financial crisis. The Bank of Canada also pledged to continue its extraordinary level of monetary support at its September meeting. The overnight interest rate remained at 0.25%, and the bank continued to purchase \$5 billion of government bonds per week. These unprecedented stimulus programs resulted in strong investor flows into credit markets as investors sought incremental yield in an ultra-low interest rate environment. As an example, US investment-grade bond funds received US\$70 billion of flows year-to-date, compared to US\$24 billion during all of 2019. Canadian fixed income funds have also experienced strong inflows. The resulting demand for Canadian corporate bonds helped push credit spreads tighter. Despite the improving macro backdrop, there was a wide range of outstanding risks such as concerns of a second surge of virus infections, commodity price weakness, global trade tensions, the upcoming U.S. presidential election and tight valuation levels that weighed on investor sentiment. In our view, these factors contributed to the Canadian corporate bond market experiencing its first negative monthly excess return since March during September.

The Canadian fixed income market, as measured by the FTSE Canadian Universe Bond Index, returned 0.44% during the third quarter. This brought year-to-date returns to 7.9%. Positive performance reflected a modest tightening of credit spreads with corporate bonds outperforming federals and provincials. The average corporate credit spread tightened 22 bps to 138 bps, which is near long-term average levels. This compares to the year-to-date wide of 274 bps reached in March and the January low of 100 bps. Within corporates, BBBs outperformed the higher quality A and AA segments. From an industry perspective real estate, industrials and financials outperformed the broader corporate index. Infrastructure, communications and energy lagged. The Government of Canada yield curve bear steepened during quarter with short-term yields declining, and longer-term rates rising. The 10-year yield increased 4 bps to 0.69% and the 30-year yield rose 11 bps to 1.10%.

Portfolio Outlook and Positioning

Portfolio Positioning

In our opinion, portfolio positioning reflects a mostly positive outlook for spread sectors. We believe global central banks have clearly communicated they will continue to support the economic recovery with unprecedented levels of monetary accommodation. This "wall of money" may continue to place downward pressure on credit spreads. While there may be periods of volatility, we believe these actions will outweigh the outstanding macroeconomic, geopolitical and fundamental risks. As such, portfolios maintain overweight positions to spread sectors, which we increased slightly during the quarter. We are highly selective with a focus on issuers that we believe have durable fundamental outlooks. Portfolios also maintain the flexibility to capitalize on anticipated episodes of volatility. Finally, with interest rates suppressed, the ability to add value through active duration and yield curve positioning is limited. Therefore, we are managing duration close to index levels.

The commentary included in this report was based on a representative fully discretionary portfolio for this product style; as such the commentary may include securities not held in your portfolio due to account, fund, or other limits.

CERTIFICATE OF PORTFOLIO COMPLIANCE

MFS Canadian Core Plus Fixed Income Fund

To the best of my knowledge, for the quarter ending September 30, 2020, MFS Investment Management Canada Limited ("MFS") complied in all material respects with the investment restrictions contained in the applicable Offering Memorandum or Offering Memoranda for the MFS Canadian Core Plus Fixed Income Fund. Such certification is subject to the following conditions: (i) MFS' compliance testing is performed using portfolio valuation reports derived from its internal security inventory system and not the books and records of the Portfolio; and (ii) MFS is responsible for compliance with the investment restrictions as stated in the applicable Offering Memorandum or Offering Memoranda.

MFS Investment Management Canada Limited.
