MARKET OVERVIEW

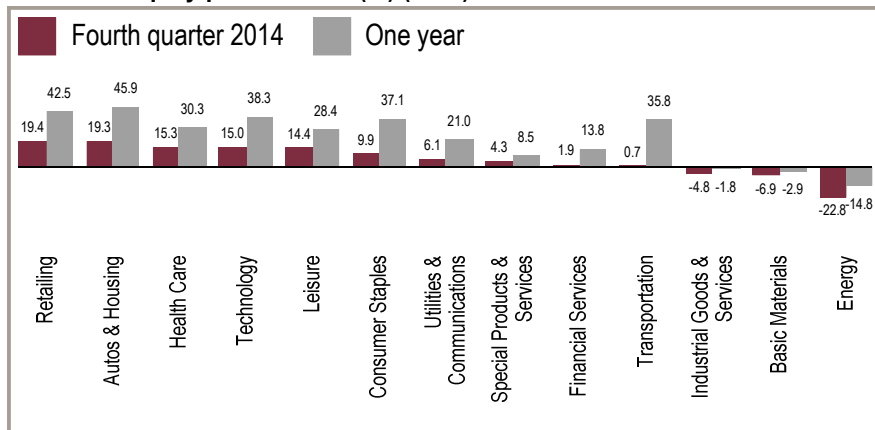

Global Equity performance (%) (CAD) as of 31-Dec-14

Source for benchmark performance: SPAR, FactSet Research Systems Inc.

Canadian Equity performance (%) (CAD) as of 31-Dec-14

Source: FactSet. Sector performance based on MFS sector classification. The analysis of TSX Composite Index constituents are broken out by MFS defined sectors.

Fourth quarter 2014 Global Equity market review

- The global economic expansion has continued into 2015, thanks mainly to the strength of the US economy. Nevertheless, the expansion has remained far from normal, as growth has been unsynchronized across regions and still dependent on easy monetary policies, and there remain blockages in the credit system.
- The United States is expected to move toward a gradual normalization of interest rates amidst stronger GDP growth, a strengthening labor market and improving consumer spending, whereas Europe and Japan continue to rely on monetary and fiscal stimulus policies to combat growth and disinflationary challenges.
- Equity market valuations have risen and are now fair to fully valued. We anticipate higher equity market volatility as diverging global growth and potential rate hikes in the US may not be fully reflected by the global market.
- Emerging economies face a subdued growth outlook given some difficulty in transitioning from fixed-asset investment to consumption-led growth, the rising US dollar and declining commodity prices. We believe structural changes are needed to correct imbalances, which should lead to a long-term improvement of returns in emerging markets.

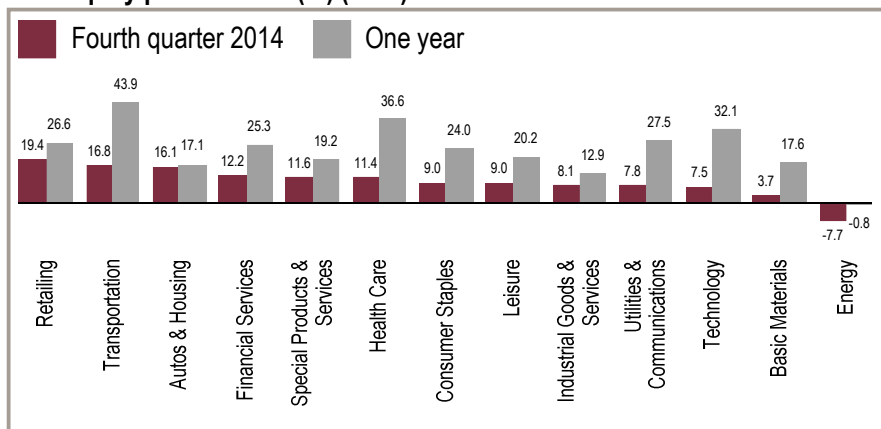

Fourth quarter 2014 Canadian Equity market review

- Canadian equities registered a second consecutive quarter of negative price return amid higher volatility, reflecting the impact of decelerating Global economic growth, increased geopolitical risks and sharply lower commodity prices. For the third consecutive year the Canadian equity market finished in positive territory.
- Sector leadership trends that emerged in the third quarter intensified with a significant decline in the energy sector being largely offset by strength in consumer staples, information technology, healthcare and consumer discretionary sectors.
- The valuation and earnings profile of global markets generally reflect the divergent economic performance. The best values are predominately in EM and European markets with North America relatively expensive. With the exception of Japan, the trend of earnings expectations has been weakening globally.
- Canadian equities remain relatively fully valued in global context however the recent underperformance has the S&PTX trading at the lower end of its recent range vs. the S&P 500. While a stabilization and recovery in commodity prices is likely at some point in 2015, the overriding supply/demand dynamics aren't likely supportive of a return to commodity super-cycle conditions that prevailed over the past 15 years. Monetary policy remains supportive however a precarious consumer and provincial debt profile coupled with an export profile which is less leveraged to the US than in previous economic expansions provides a less than attractive earnings and valuation outlook. Having said that, a number of companies and sectors within the Canadian market are well positioned for the current macro backdrop; particularly those exposed to lower commodity prices, a strong US economy and a lower for longer interest rate environment.

MARKET OVERVIEW

U.S. Equity performance (%) (CAD) as of 31-Dec-14

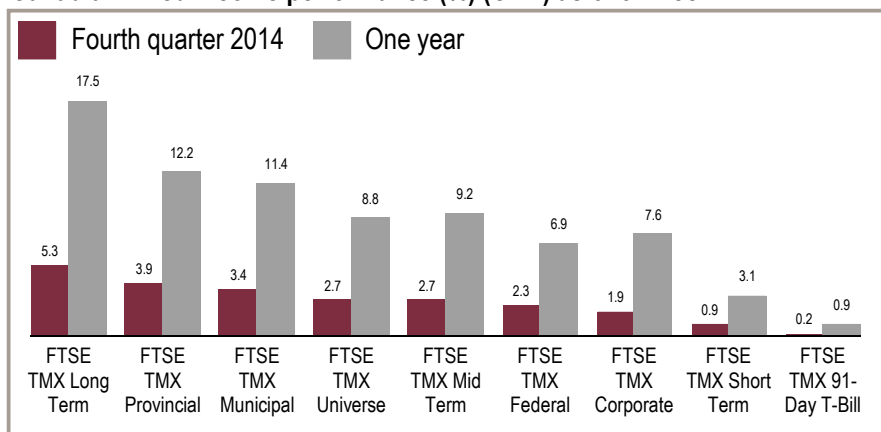

Source: FactSet. Sector performance based on MFS sector classification. The analysis of S&P 500 Index constituents are broken out by MFS defined sectors.

Fourth quarter 2014 U.S. Equity market review

- The U.S. market, as measured by the S&P 500 Index, was resilient during Q4 after falling in early October and enduring a small pullback in December, which was mainly driven by the accelerated fall in the price of oil.
- In general, the U.S. economy picked up the pace of growth during the 4th quarter and back half of the year after posting slower growth during the beginning of 2014. Global growth remains unsynchronized as the U.S. is the growth leader among the major economies. While the Federal Reserve has ended its quantitative easing and is guiding the market toward a midyear rate tightening cycle, other monetary policymakers (i.e. ECB, BOJ and potentially the People's Bank of China) will most likely continue "super easy" monetary conditions.
- In addition, investors bid up the price of defensive, higher yielding stocks such as REITs and electric power companies in Q4, continuing a theme which persisted throughout 2014. In contrast, most companies related to energy had a very difficult quarter as the falling price of oil and natural gas was accelerated when OPEC decided not to cut production during their November meeting.

Canadian Fixed Income performance (%) (CAD) as of 31-Dec-14

Source for benchmark performance: SPAR, FactSet Research Systems Inc. All indices represent total return unless otherwise noted.

Fourth quarter 2014 Canadian Fixed Income market review

- All sectors of the Canadian bond market posted strong returns in the fourth quarter with yields edging lower across the curve. Plummeting oil prices, global disinflationary pressures, and diverging global growth trends should continue to contribute to the ongoing low yield environment.
- The Bank of Canada maintained its dovish policy bias. With the collapsing price of oil, the Bank of Canada will likely be more hesitant to raise rates and should lag any Fed tightening in 2015.
- Following a global trend, Canadian corporate spreads widened considerably – especially in the energy sector – due to risk aversion, management decisions benefitting shareholders, and concerns about slowing global economic growth. This may result in long-term investment opportunities in credits exhibiting strong fundamentals throughout the cycle.

Segregated fund performance is calculated on a gross of management fee basis. Pooled fund performance is calculated on a gross of management fee basis, net of the administrative fee expense calculation. Total portfolio performance is calculated on a gross of management fee basis and is impacted by timing of client flows along with asset mix changes and rebalancing.

ASSET SUMMARY

Asset allocation as of 31-Dec-14

MFS' asset mix view

We continue to characterise the macro environment as one of modest global economic growth with minimal inflation pressures. However, the plunge in energy prices is creating downside risk to inflation but modest upside risks to growth. Global monetary policy is likely to remain highly stimulative and long term interest rates low. This supports equities versus fixed income and we remain overweight stocks versus bonds and cash despite the increase in equity valuations over the past few years. We continue to expect global growth to be unsynchronised, with the U.S. economy a growth leader, Europe lagging, and China and other emerging economies continuing to slow. This divergence has led to a breakout in the U.S. dollar against all major currencies including the Canadian dollar as well as a sharp drop in commodity prices. We expect the commodity weakness to weigh on the earnings and performance of the relatively resource-heavy Canadian equity market and as a result we remain positioned underweight Canadian equities versus global equities. As bond yields rallied in the fourth quarter, we reduced exposure and are now underweight versus the benchmark.

SIGNIFICANT IMPACTS ON PERFORMANCE – CONTRIBUTORS

			Relative contribution (%)
Energy		Stock selection within this sector contributed to relative performance.	0.9
	EnCana Corp	Timing in the ownership of independent energy company Encana (Canada) supported relative returns. The shares declined in correlation with the drop in oil prices during the period, as was the case for many energy-related companies.	0.3
	Canadian Oil Sands Trust	Not holding Canadian Oil Sands Trust (Canada) aided relative returns. Falling oil prices during the period drove shares of many energy companies, including Canadian Oil Sands Trust, lower. Management also reduced the firm's quarterly dividend by 43%.	0.3
Retailing		An overweight position in Retailing contributed to relative performance as the sector outperformed the wider market over the quarter.	0.6
	Alimentation Couche	An overweight position in Canada-based convenience store operator Alimentation Couche contributed to relative performance. The share price spiked late in the period as the company reported positive earnings and the highly-anticipated acquisition of The Pantry during the quarter.	0.5
	Loblaw Companies	An overweight position in Canadian food retailer Loblaw Companies aided relative results as the shares outpaced the benchmark during the quarter. The company released results that were ahead of consensus estimates on the back of lower-than-anticipated interest expense and strong same-store sales growth in Loblaw attributable to retail inflation.	0.3
Basic Materials		Stock selection within this sector contributed to relative performance. However, there were no individual shares within this sector that were among the portfolio's top relative contributors for the reporting period.	0.6
Industrial Goods & Services		Stock selection within this sector contributed to relative performance.	0.5
	Progressive Waste Solutions Ltd	An overweight position in non-hazardous solid waste disposal service provider Progressive Waste Solutions (Canada) bolstered relative performance after the company disclosed a change in taxation regarding debt refinancing, which appeared to have been viewed as a positive for the stock.	0.3
Individual stocks	Magna Intl Inc	Canadian car parts maker and contract vehicle manufacturer Magna International contributed positively to returns. The company announced better-than-expected profit in the third quarter that beat analyst expectations, boosted by strong demand in North America.	0.4
	Quebecor Inc	An overweight position in telecommunications, entertainment and news media services provider Quebecor (Canada) strengthened relative returns as the company released results slightly ahead of consensus estimates, driven by better-than-expected wireless subscriber loading and an increase in average revenue per user.	0.3

SIGNIFICANT IMPACTS ON PERFORMANCE – DETRACTORS

			Relative contribution (%)
Financial Services		Stock selection within this sector detracted from relative performance.	-0.3
	Brookfield Asset Mgt	Not holding shares of diversified asset manager Brookfield Asset Management (United States) held back relative performance. The shares rose steadily as the company reported positive earnings due to growth in its property assets and increased fees.	-0.3
Individual stocks	BCE Inc	Not holding shares of diversified communications company BCE (Canada) held back relative performance. The shares rose steadily due to increased earnings on the back of growth in the company's Wireless and Data segments. Management's decision to increase guidance also helped.	-0.3
	Canadian Natural Resources Ltd	Shares of crude oil and natural gas exploration company Canadian Natural Resources (Canada) traded lower during the period despite announcing better-than-expected earnings as profits weakened year over year. CNR was impacted by declining oil prices, as were several other oil companies, and higher expenses.	-0.3
	Legacy Oil & Gas Inc	An overweight position in intermediate oil and natural gas company Legacy Oil + Gas (Canada) dampened relative results as lower-than-anticipated price realisations and higher-than-expected operating costs weakened profits. The company also increased its borrowing base by an additional \$100 million (£66 million) during the quarter.	-0.2
	Cenovus Energy Inc	Holdings of Cenovus Energy (Canada) declined during the period along with many other energy companies, as the price of oil fell.	-0.2

PORTFOLIO OUTLOOK AND POSITIONING

The Canadian Equity Core strategy is focused on investing in shares of high quality businesses that either offer above-average growth opportunities or trade at attractive relative valuation levels versus their peers and the market. Portfolio sector positioning is a product of our stock selection-driven portfolio construction approach.

The strategy's sector exposure profile has not changed materially through the quarter. We continue to favour the transportation and industrials areas, which encompass the railroads, airlines, machinery, and pollution control industries. A combination of best-in-class operators, high barriers to entry due to pricing power and market position, coupled with attractive valuations are amongst the main reasons underlying our preference. Auto parts manufacturers continues to be another area we like, where our holding represents an attractive value supported by a strong balance sheet and an opportunity to further increase its operating margins and returns generated. Finally, within the retailing sector, we prefer food and drug store names, where we own shares of companies with strong market positions and attractive valuations.

Conversely, we continue to see a limited number of opportunities in utilities & communications companies. The theme of fully valued securities, in our opinion, is the dominant presence through most of the companies in this sector. Telecommunications companies are facing their own set of challenges, from structural business shifts in landline to wireless businesses, to senior management transition and increased government scrutiny of the competitive landscape. Additionally, high capital intensity typically associated with these types of businesses is an additional hurdle in our assessment of the opportunities.

During the quarter we have repositioned certain holdings in order to better reflect the relative opportunity set. Key trades for the quarter included:

- Continuing to build a position in Enbridge, energy transportation and distribution company, as the pipeline operator offers less political risk, and has a better growth profile while trading at the same level as its, in our opinion relatively riskier, competitor – TransCanada.
- Paring back our overall exposure to railways by downsizing CP Rail and Canadian National in order to better reflect the valuation prospects. After recording very strong gains in 2014, both stocks trade at more demanding valuation levels, although still attractive based on strong underlying business fundamentals.
- Establishing a new position in Fairfax Financial, as the property & casualty insurer and reinsurer currently trades at attractive valuations relative to its peers, and is being funded by a trim in our holdings of Intact Financial where relative valuation profile is not as attractive.

PORTFOLIO OUTLOOK AND POSITIONING

- Increasing our position in Canadian Tire, as the Canadian retailer looks attractively valued versus its competitors. Key parts of our investment thesis focus on the available cost reductions, favourable operating leverage dynamics and increasing return on invested capital profile. Management continues to pay down debt, buy back shares and grow the dividend, all the factors we typically tend to look for. On the opposite side of spectrum, we have further reduced our position in Magna, as the auto sales cycle recovery matures and potential margin pressures start to build. We continue to like the stock's business fundamentals relative to valuations, but are managing the position size to reflect some of the industry-level concerns.
- Adding to our industrials holdings – CAE and Stantec. Shares of CAE, a flight simulation and integrated training services provider, could benefit from an increase in sustainable earnings growth brought upon by a combination of a continuing strength in the simulation segment and an increase in utilization on the training side of business. Stantec, in our opinion represents a very attractive opportunity within the engineering and construction segment with its diversified business profile spanning from resources to environmental engineering and urban development, and mainly focused on the design and engineering parts of the process with minimal construction exposure. With a pretty significant opportunity in the US market, we find the stock attractive based on valuations relative to the growth prospects

Canadian equities remain relatively fully valued in global context however the recent underperformance has the S&P/TSX trading at the lower end of its recent range vs. the S&P 500. While a stabilization and recovery in commodity prices is likely at some point in 2015, the overriding supply/demand dynamics aren't likely supportive of a return to commodity super-cycle conditions that prevailed over the past 15 years. Monetary policy remains supportive, however a precarious consumer and provincial debt profile coupled with an export profile which is less leveraged to the US than in previous economic expansions provides a less than attractive earnings and valuation outlook. Having said that, a number of companies and sectors within the Canadian market are well positioned for the current macro backdrop; particularly those exposed to lower commodity prices, a strong US economy and a lower for longer interest rate environment. Through our exposure to high quality companies that are able to withstand potential adverse conditions, we believe the portfolio remains well positioned to perform favourably relative to the market over the long term, regardless of particular stages of the economic cycle.

The positioning commentary included in this report was based on a representative fully discretionary portfolio for this product style; and, as such, your portfolio may differ.

CERTIFICATE OF PORTFOLIO COMPLIANCE

To the Unit Holders of the MFS Canadian Equity Core Fund

To the best of my knowledge, for the quarter ending December 31, 2014 MFS Investment Management Canada Limited ("MFS") complied in all material respects with the investment restrictions contained in the Offering Memorandum dated July 10, 2014 for the MFS Canadian Equity Core Fund. Such certification is subject to the following conditions: (i) MFS' compliance testing is performed using portfolio valuation reports derived from its internal security inventory system and not the books and records of the Portfolio; and (ii) MFS is responsible for compliance with the investment restrictions as stated in the Offering Memorandum.

MFS Investment Management Canada Limited.

SIGNIFICANT IMPACTS ON PERFORMANCE – CONTRIBUTORS

			Relative contribution (%)
Financial Services		Stock selection within this sector contributed to relative performance.	0.4
	Visa Inc	An overweight position in global payments technology company Visa (United States) boosted relative performance, after the company reported better-than-expected revenue and lower operating expenses for the quarter. Additionally, management announced solid earnings guidance for the full year 2015, reflecting a robust margin outlook that supported its share price during the quarter.	0.3
Special Products & Services		Stock selection within this sector contributed to relative performance. However, there were no individual shares within this sector that were among the portfolio's top relative contributors for the reporting period.	0.3
Utilities & Communications		Stock selection within this sector contributed to relative performance. However, there were no individual shares within this sector that were among the portfolio's top relative contributors for the reporting period.	0.3
Leisure		Stock selection within this sector contributed to relative performance. However, there were no individual shares within this sector that were among the portfolio's top relative contributors for the reporting period.	0.3
Individual stocks	IBM Corp	Not owning diversified technology products and services company IBM (United States) benefited relative performance. Shares declined after the tech giant reported sharply lower third-quarter earnings as sales declined across most of its segments. It also cut guidance for 2014 FY operating earnings per share and free cash flow as well as pulling its long-standing \$20 (£13) EPS target for 2015.	0.2
	Danaher Corp	The portfolio's overweight position in industrial and consumer products manufacturer Danaher (United States) contributed to relative performance. Shares traded higher as investors appeared to react positively to the new CEO reiterating that mergers and acquisition will remain the focal point from a capital allocation standpoint and highlighting their substantial M&A capacity.	0.2
	Limited Brands Inc	Speciality retailer Limited Brands (United States) aided relative performance as the company released strong results due, in part, to robust sales growth and both the Victoria's Secret and Bath & Body Works segments showing strong top-line and EBIT growth on merchandise margin rate improvement. The company's international business also showed gains as it continued to expand both company-owned and franchise units.	0.2

SIGNIFICANT IMPACTS ON PERFORMANCE – DETRACTORS

			Relative contribution (%)
Technology		Stock selection within this sector detracted from relative performance.	-0.4
	Google Inc	Shares of internet giant Google (United States) detracted from relative results. The company missed analysts' estimates for both revenue and income, making this the fourth consecutive quarter in which the company has fallen short on earnings expectations. The company continued to face headwinds from a maturing internet search market, challenges with monetising mobile search, and regulatory anti-trust rulings in the EU.	-0.2
Transportation			-0.2
Individual stocks	Noble Energy Inc	An overweight position in oil and natural gas exploration and production company Noble Energy (United States) detracted from relative performance after the company posted below-consensus earnings. The recent decline in the price of oil has also caused negative investor sentiment towards most oil and energy-producing companies.	-0.5
	Cameron International Corp	An overweight allocation to oil and gas equipment manufacturer Cameron International (United States) detracted from relative performance. Shares traded lower, along with many other energy companies, as oil prices declined through the period. Management also reduced 2015 and 2016 earnings estimates.	-0.3
	Schlumberger Ltd	Shares of oil field services company Schlumberger (United States) weighed on relative performance, as shares were down during the period following lower anticipated growth in exploration and production, driven by a decline in oil prices.	-0.2

PORTFOLIO OUTLOOK AND POSITIONING

The portfolio is focused on large-cap, higher-quality companies with sound, above average earnings/cash flow growth trading at reasonable valuations. More specifically, key attributes that we look for in an investment include sustainable, durable franchises with real barriers to entry, above average returns that are in excess of the cost of capital, balance sheets that can withstand adverse market conditions, and solid management teams that aim to allocate capital prudently and create long term value.

Looking at current positioning, we continue to find a number of compelling investment opportunities in major banks, business services, broadcasting, and medical equipment. Among major banks, attractive valuations, a modestly improving environment, the scope for further expense reductions (for example, the shift from teller deposits to online deposits), and solid capital return make several large cap banks attractive. Within business services we are essentially gaining exposure to technology with positions in technology consulting and outsourcing companies Accenture and Cognizant. Specifically, our global technology team believes cloud computing will have a profound impact on technology spending for years to come. However, many of the companies likely to directly benefit from cloud computing trade at excessive valuations while some of the more established companies in technology are threatened by cloud computing, making investing in the sector challenging. Investing in Accenture and Cognizant help solve this issue as both are high quality companies that benefit from the move to the cloud regardless of which technology wins and trade at attractive valuations.

In broadcasting we favour the content owning media business models where trends remain stable. Specifically, we own Walt Disney, Time Warner and Twenty-First Century Fox which are well positioned to grow, driven by affiliate fees, and are least exposed to advertising risks among media companies. In addition, as viewing gets less linear and more on-demand, the best content becomes more valuable and the names we own have enough scale and differentiated content to be successful. In medical equipment we have found a mix of medical equipment and supplies companies that offer a combination of growth (driven by favourable long-term demographic trends that should drive volumes, favourable mix shift, new product launches and a focus on innovation, and penetration in faster growing markets), high or improving relative market share, expanding margins, strong free cash flow generation, prudent capital deployment and stock prices trading at attractive valuations.

Conversely, we have no exposure to integrated energy, biotechnology, telephone services, and REITs, and we are not finding many compelling opportunities in insurance, especially life insurance. Our concerns with the integrated energy companies are that return on invested capital will be lower given increased capital expenditures have not translated into increased production growth and valuations seem full. We have no exposure to biotechnology companies as valuation concerns have outweighed the prospect of higher earnings. In addition, we are gaining exposure to biologics through more attractively valued names classified as pharmaceuticals, including Bristol-Myers Squibb and a new position in AbbVie.

PORTFOLIO OUTLOOK AND POSITIONING

Not owning telephone services companies is due to concerns around increased competition in wireless that is having a negative impact on pricing, the likelihood that capital intensity will remain relatively high as they continue to build out their networks, and valuations that are not compelling. We continue to have no exposure to REITs which look expensive relative to other financials and are once again trading at the high end of their historic trading range. Finally, within insurance, while life insurance stocks are likely to benefit should we see a rising interest rate environment, we believe the businesses are still challenged long term and prefer other investments within financial services. In addition, not owning large benchmark constituent Berkshire Hathaway on valuation concerns increases our underweight.

Key trades for the quarter included:

- Initiating a position in pharmaceutical company AbbVie. We believe the company should benefit from its hepatitis C drugs, an opportunity we believe the market is undervaluing given that AbbVie will likely take market share from Gilead Sciences given payer pushback on the high cost of curing HCV. In addition, we believe the expected fade in Humira growth shouldn't be too dramatic, providing downside support for the company's stock price.
- Initiating a position in pharmaceutical company Actavis. We like the speciality pharma space and the Allergan deal now locks Actavis into managing the business and paying down debt, both areas where we have a lot of confidence. In addition, we believe the company be an above average grower for at least the next 4-5 years and that the stock traded at a level that undervalues its growth profile.
- Initiating a position Eli Lilly which also operates in the pharmacy space. Eli Lilly offers a number of pipeline assets across its diabetes, neurology and oncology platforms that could be transformative and drive significant earnings growth, and increased optionality in their lead candidate for Alzheimer's, Solanezumab. In addition, the Novartis animal health acquisition made Lilly the second largest animal health company and increases their duration of growth.
- Trimming shares of pharmaceutical stock Pfizer into recent share price strength, the proceeds of which were largely used to fund the health care sector purchases described above.

2014 has been a challenging year from a relative performance perspective driven partly by an unfavourable market environment. One of the more notable headwinds during 2014 was the strong performance of high dividend yield stocks with utilities and REIT's notable outperformers helped by the 10-year Treasury yield's 86bp decline. We have been underexposed to higher yielding equities due to valuation concerns and this positioning hurt relative performance during the course of the year. And while much of the year we experienced a more challenging stock picking stretch, we were encouraged with the improved performance as we moved into year end. The combination of the end of QE, a modest market correction in October, a major pullback in oil prices and a rise in high yield bond spreads appears to have changed the market dynamic. As a result, our relative performance picked up significantly during November and December. Whether these trends persist into 2015 time will tell, but we will continue to seek out investment opportunities that can drive strong risk-adjusted performance over the long term.

The positioning commentary included in this report was based on a representative fully discretionary portfolio for this product style; and, as such, your portfolio may differ.

SIGNIFICANT IMPACTS ON PERFORMANCE – CONTRIBUTORS

			Relative contribution (%)
Health Care		Stock selection within this sector contributed to relative performance. However, there were no individual shares within this sector that were among the portfolio's top relative contributors for the reporting period.	0.5
Special Products & Services		An overweight position in Special Products & Services contributed to relative performance as the sector outperformed the broad market over the quarter.	0.4
	Compass Group	Holdings of food services provider Compass Group (United Kingdom) contributed to relative performance. Shares rose as the company revealed a jump in profits due to strong demand in North America and emerging markets.	0.3
Basic Materials		Stock selection within this sector contributed to relative performance.	0.4
	BHP Billiton PLC	The portfolio's avoidance of poor-performing Australian mining company BHP Billiton benefited relative performance. Lower oil and iron ore prices drove the decline in the shares during the reporting period.	0.2
Individual stocks	Taiwan Semiconductor	Holdings in semiconductor manufacturer Taiwan Semiconductor (Taiwan) boosted relative performance due to strong orders of Apple's 20nm application processor and healthy levels of inventory.	0.3
	LVMH Moët Hennessy Louis Vuitton SA	French luxury retailer LVMH gained for the quarter and contributed to relative returns. Investors appeared to react favourably to news that LVMH had agreed to distribute a portion of its shares in handbag-maker Hermès to shareholders.	0.3
	WPP Group PLC	An overweight position in advertising and marketing firm WPP Group (United Kingdom) boosted relative performance. The company's quarterly results and future guidance were in line with market consensus. Earnings growth is expected to strengthen, reflecting foreign exchange movements, lower interest on debt refinancing and share buybacks.	0.2
	DBS Group Holdings	The portfolio's position in DBS Group (Singapore), Southeast Asia's largest bank, contributed to relative performance. The bank posted a third consecutive quarter of profit growth, as higher fees from wealth management and investment banking offset slower loan growth.	0.2

SIGNIFICANT IMPACTS ON PERFORMANCE – DETRACTORS

			Relative contribution (%)
Autos & Housing		Stock selection within this sector detracted from relative performance.	-0.3
	Honda Motor Co Ltd	Shares of Honda Motor (Japan) negatively impacted relative performance during the quarter. The automaker trimmed its full-year sales forecast, citing competition in Japan and China as well as the impact of recalls on new-model development.	-0.2
Consumer Staples		Stock selection within this sector detracted from relative performance. However, there were no individual stocks within this sector that were among the portfolio's top relative detractors for the reporting period.	-0.2
Individual stocks	BG Group PLC	The portfolio's overweight position in shares of oil and gas company BG Group (United Kingdom) held back relative performance. Shares declined due to falling oil prices and OPEC's (Organization of Petroleum Exporting Countries) decision to not intervene by reducing output during the reporting period.	-0.3
	Standard Chartered	An overweight position in banking group Standard Chartered (United Kingdom) detracted from relative performance as the shares fell during the period, following disappointing third quarter results due to weaker revenue, higher loan losses and a lack of capital generation.	-0.3
	Inpex Corporation	Holdings of oil & gas exploration company Inpex (Japan) detracted from relative returns. The company released results that were negatively impacted by lower overall production and a higher realised tax rate. Additionally, management lowered future guidance to reflect lower oil prices and a weaker yen.	-0.2
	Sberbank	Shares of financial services company Sberbank (Russia) detracted from relative performance as the Russian banking sector faced headwinds from the devaluation in the Russian rouble, rapid rate hikes and a macro recession. Additionally, Western sanctions put further pressure on the sector with regard to the refinancing of foreign obligations.	-0.2
	Saipem	The timing of the portfolio's ownership in oil and gas turnkey contractor Saipem (Italy) weakened relative performance as shares were down following the suspension notice received for its marine activities on the South Stream pipeline project and uncertainties surrounding the final economic impact this would have on the company. Additionally, investors bid down many energy stocks during this period due to what appeared to have been concerns over falling oil prices resulting from slowing demand and increasing supply.	-0.2
	Li & Fung	Holdings of Li & Fung (Hong Kong), a leading supplier to global retailers, detracted from relative performance on concerns about weak US and European retail environments, declining margins and the company missing its three-year targets for the third consecutive time.	-0.2

PORTFOLIO OUTLOOK AND POSITIONING

The International Equity strategy is focused on high-quality companies with sustainable above-average growth and returns, whose prospects are not reflected in their valuation.

We continue to favour consumer staples, speciality chemicals, and technology companies. Our investments in consumer staples companies, in general, have strong brands and diverse geographical footprints that we believe should enable them to grow at above-average rates; these companies generally have strong balance sheets, good cash flow generation and attractive valuations. We believe our holdings in speciality chemicals companies generally display more stable returns through the cycle relative to other resource-related industries. Finally, within technology, we own several companies that we believe should benefit from an increased penetration of smartphones, and the adoption of tablets, on a global basis.

Conversely, many companies that are sensitive to energy and commodity prices do not meet our sustainable growth investment criteria. This includes most integrated energy companies, which are facing declining free cash flow, and metals & mining companies. There are also limited opportunities to invest in electric power and telecommunication companies, particularly in developed markets. We believe returns and growth rates for telecommunication companies are low because competitive pressures and technological changes generally keep capital intensity relatively high. The regulatory environment for electric utilities remains a headwind due to the fiscal stress of governments globally.

While the financial sector is still the strategy's largest sector in absolute terms, we remain cautious due to our belief that most developed market commercial banks and insurance companies cannot grow faster than global GDP through a full economic cycle. We are also concerned about the increased risks for these companies given the political issues facing many developed market countries' financial systems, and the near-term uncertainty regarding possible outcomes.

Key trades during the quarter included:

- Increasing our position in British Sky Broadcasting, an entertainment and communications provider. We believe the acquisition of Sky Germany and Sky Italia should enable the company to increase its eps growth rate from mid-single digits to mid-high teens, increases the duration of the company's growth, and should result in shareholders receiving a 4% dividend yield. A valuation of less than 12x 2016 earnings provided an attractive entry point.
- Starting a position in Bureau Veritas. BV is a France-based company primarily engaged in the business support sector. It offers a range of services, including asset management, certification, classification services, consulting, inspections and audits, testing and analysis, and training. We believe the company has lower capital intensity versus peers as it has more exposure to certification businesses that are conducted by inspectors onsite. Slowing global trade provided an attractive entry point.

PORTFOLIO OUTLOOK AND POSITIONING

- Continuing to build a position in ProSiebenSat.1 Media AG. We believe ProSieben is a well-run, innovative German broadcasting company which should benefit from advertising growth, and growth in its digital operations.
- Increasing our weighting in Danish brewer Carlsberg. We believe the company is capable of generating sustainable above-average growth and returns, driven by its significant exposure to Eastern Europe and potential for margin improvement through cost savings. To fund this transaction we trimmed our position in Dutch brewing company Heineken.
- Trimming global financial services company, Standard Chartered due to concerns regarding the company's future growth potential and increased competitive pressures. We also eliminated our position in financial services company BM&F Bovespa following strong performance post the elections in Brazil.
- Eliminating our holding in Italian-based oil services company Saipem following another profit warning in the third quarter and concerns that the company's debt could become expensive or impractical to refinance given the poor environment for energy prices.

Global equity markets continued to be supported by modest economic growth and accommodative monetary policies in 2014, despite divergence of regional economies and some geopolitical uncertainties. Outside the US market, which regained its footing in 2014, other regions are still suffering from low consumer confidence, limited capital spending and deflationary pressures, leading to negative earnings revisions and equity market underperformance. Japan has been the only exception, primarily because of the weak yen. While Prime Minister Abe's "three arrows" were initially well received by markets and generally regarded as defining moments for policy, the Japanese economy continued to show minimal evidence of cooperation with its central bankers. Similar to Japan, the reform and growth picture in Europe is not much brighter, which is why the ECB may eventually be forced to resort to aggressive quantitative easing along the lines of the Fed and Bank of Japan programs. Over the course of next year, however, we do expect financial conditions to ease, with less fiscal drag and a weaker euro also helping to provide some support for eurozone earnings. We believe emerging markets face a subdued growth outlook given some difficulty in transitioning from fixed-asset investment to consumption-led growth. With the global recovery remaining far from normal, we expect the environment of low inflation and interest rates to persist. Through our exposure to high-quality companies, we believe the portfolio remains well positioned to outperform the market over the long term, regardless of particular stages of the economic cycle.

The positioning commentary included in this report was based on a representative fully discretionary portfolio for this product style; and, as such, your portfolio may differ.

CERTIFICATE OF PORTFOLIO COMPLIANCE

To the Unit Holders of the MFS International Equity Fund

To the best of my knowledge, for the quarter ending December 31, 2014, MFS Investment Management Canada Limited ("MFS") complied in all material respects with the investment restrictions contained in the Offering Memorandum dated July 10, 2014 for the MFS International Equity Fund. Such certification is subject to the following conditions: (i) MFS' compliance testing is performed using portfolio valuation reports derived from its internal security inventory system and not the books and records of the Portfolio; and (ii) MFS is responsible for compliance with the investment restrictions as stated in the Offering Memorandum.

MFS Investment Management Canada Limited.

PORTFOLIO COMMENTARY

Performance commentary	Underperformance was a result of a shorter relative duration stance	The portfolio underperformed its benchmark for the period. A shorter relative duration was a primary detractor from relative performance and outweighed positive bond selection within financials and provincial issues.
Strategy and positioning	Duration and maturity profile	We continue to expect the current environment of modest global economic growth and low inflation to persist. Yet despite little change to our macro outlook, we reduced the portfolio's duration and adopted a modestly short duration posture relative to the benchmark given the strength of the bond market rally and change in valuation. This was achieved primarily by selling mid- and long-term federal government bonds in favour of shorter-dated issues. As a result, the portfolio's exposure to mid-term bonds was reduced but remains overweight given low risk of Bank of Canada tightening.
	Sector profile	As spreads widened throughout the quarter, we selectively added to our corporate overweight by participating in higher-yielding new issues within the financials sector. Though we maintained our modest underweight in provincials, we re-allocated our Western holdings by reducing Alberta in favour of Manitoba, which offers less exposure to oil prices.

Credit quality (% of total assets) as of 31-Dec-14

The MFS portfolio's quality breakdown is based on MFS' own methodology, which is different from that used by the benchmark provider. MFS has not independently verified the benchmark data. For all securities other than those specifically described below, ratings are assigned to underlying securities utilizing ratings from Moody's, Dominion Bond Rating Service (DBRS), and Standard & Poor's rating agencies and applying the following hierarchy: If all three agencies provide a rating, the middle rating (after dropping the highest and lowest ratings) is assigned; if two of the three agencies rate a security, the lower of the two is assigned. Ratings are shown in the S&P and DBRS scale (e.g., AAA). All ratings are subject to change. U.S. Government includes securities issued by the U.S. Department of the Treasury. Federal Agencies includes rated and unrated U.S. Agency fixed-income securities, U.S. Agency MBS, and CMOs of U.S. Agency MBS. Other Not Rated includes fixed income securities which have not been rated by any rating agency, and cash.

CERTIFICATE OF PORTFOLIO COMPLIANCE

To the Unit Holders of the MFS Canadian Fixed Income Fund

To the best of my knowledge, for the quarter ending December 31, 2014, MFS Investment Management Canada Limited ("MFS") complied in all material respects with the investment restrictions contained in the Offering Memorandum dated July 10, 2014 for the MFS Canadian Fixed Income Fund. Such certification is subject to the following conditions: (i) MFS' compliance testing is performed using portfolio valuation reports derived from its internal security inventory system and not the books and records of the Portfolio; and (ii) MFS is responsible for compliance with the investment restrictions as stated in the Offering Memorandum.

MFS Investment Management Canada Limited.

¹ The Average Credit Quality (ACQR) is a market weighted average (using a linear scale) of securities included in the rating categories.

Past performance is no guarantee of future results.

Figure shown reflects Class A 7-Day Yield.

Credit quality (% of total assets) as of 31-Dec-14

The MFS portfolio's quality breakdown is based on MFS' own methodology, which is different from that used by the benchmark provider. MFS has not independently verified the benchmark data. The Credit Quality table shows the percentage of portfolio assets falling within each rating category. Included in each rating category are short-term debt securities, the ratings of which are based on the short-term credit quality ratings of the securities' issuers. For repurchase agreements, the credit quality is based on the short-term rating of the counterparty with which MFS trades the repurchase agreement. Short term securities utilize the rating assigned to them by the Dominion Bond Rating Service (DBRS). Ratings are subject to change.

Dated: January 15, 2015

FIXED INCOME OUTLOOK

The Canadian bond market continued its streak of solid performance in the fourth quarter, as medium and long-term bond yields declined sharply. The FTSE TMX Canada Universe Bond Index returned 2.7% in Q4, bringing the year-to-date gain to 8.8%. This result was surprising not only because it occurred amid a low interest rate environment but because the bond rally confounded expectations as the consensus has consistently predicted a return to rising yields and poor bond returns.

As we noted last quarter, the 2014 direction of bond yields did not surprise us. It has been the magnitude of the rally – especially at the long end of the yield curve – which posted nearly 20% total returns. Our long-held macro view has remained rather static. We have viewed the global economic recovery as anything but normal – one which has struggled to maintain consistent above-trend growth even with extraordinary monetary stimulus, ongoing de-leveraging, excess capacity, and few inflation pressures. Despite this subdued outlook, we continue to view the macro backdrop as inconsistent with a global or U.S. recession – a view that we feel more strongly about in light of the excess supply-driven plunge in crude oil prices which we believe is a net positive for U.S. and global growth in 2015. We continue to expect easy money policies to persist, with the Federal Reserve likely to push off rate hikes as long as it can, the Bank of Canada likely to lag any Fed tightening, and ongoing policy easing in Europe and Japan.

In our view, however, what *has* changed is valuation in the Canadian fixed income market. The market rally has taken government bond yields significantly below our fair-value ranges, to the point where yields appear to be discounting a much weaker economic outlook than we expect. As a result, we reduced the duration exposure of our portfolios. After being positioned with a longer-than-benchmark duration for the past year, universe and long-term mandates ended Q4 moderately short versus the benchmark. Short bond mandates' durations were reduced from long to neutral, reflecting better relative value in the short end of the yield curve. Overall, we maintain a preference for 3-10 year bonds, though exposure to this segment was trimmed during the quarter.

Within credit sectors, corporate bonds continued to struggle and spreads widened further in the fourth quarter while provincial bonds outperformed. We expect corporates to regain their footing soon as valuations have improved and recession odds remain low. On the quarter, exposure to financial bonds was raised at the expense of communications, energy and real estate. Within provincials, exposure to Alberta was reduced and funds re-deployed in provinces less sensitive to lower energy prices.

The positioning commentary included in this report was based on a representative fully discretionary portfolio for this product style; and, as such, your portfolio may differ.
