

University Animal Care Committee (UACC)

Schedule 3: Restraint

<p>1 Why is restraint necessary?</p>
<p>2 Describe the type of restraint, including the equipment, drugs, etc. to be used. Describe any negative effects anticipated with this type of restraint.</p>
<p>3 Describe any preconditioning procedures which will be used to help adapt the animals to restraint.</p>
<p>4 Indicate the number of periods of restraint per day and the number of days for a subject. Indicate the maximum duration of the restraint period.</p>

5 What normal activities of the animal, such as ability to stretch, lie comfortably, turn around, groom, locomote, feed, drink, etc. are restricted or eliminated by the restraint?

6 What other techniques have you considered to avoid or reduce the level and duration of restraint? (For example: telemetry, sedation)
