

How to connect to the UW VPN – Windows 7

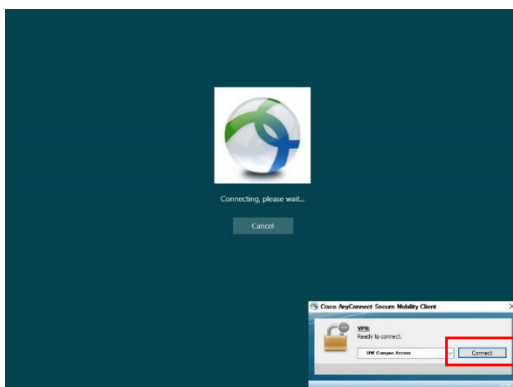

1. Power On your computer
2. When you get to the normal login screen, ***do not*** login just yet.
Click on ***Switch User***

3. At the bottom right hand corner of your screen, you will see two monitors one over top of each other, if you hover over the icon, it will say Network Sign In. Click on this icon and it will launch the ***Cisco AnyConnect VPN Software*** login screen.

4. Click on Connect

5. Enter your Network Login Username: <your network login credentials>
Enter your Network Password: <your secret password>
Click **OK**

Cisco AnyConnect | UW Campus Access

Group: UW-VPN

Username:

Password:

OK Cancel

6. It will verify your password and you should see a prompt to Accept or Disconnect the connection. Please choose **Accept**.

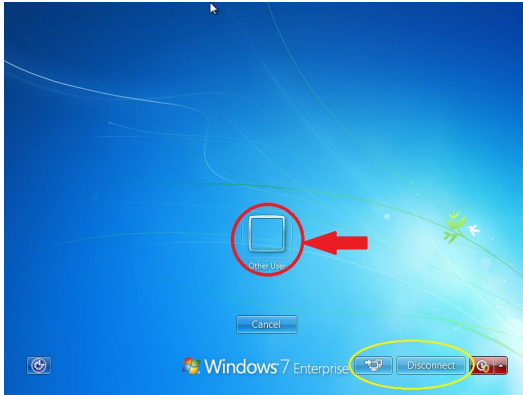

Cisco AnyConnect

You are now connected to the UW network

Accept Disconnect

7. You will now notice an additional icon in the lower right-hand corner, this means that you are now connected, click on the **Other User** icon to return to the normal login screen.

8. Please login as normal with your Network Login Username and Password.

Your computer is now connected to the UW Network, as it would be on campus. Verify that you can access your M and O drives as you would normally and that your applications behave normally.
