

## How Multifactor Authentication and VPN work together

When you login to the VPN this will trigger an MFA transaction. This allows you to approve or deny a login transaction using **only** these three methods:

- 1) Duo Mobile Push via Duo Mobile App installed on a designated smartphone or tablet

- 2) Phone Call option to a designated landline or cellphone number
- 3) Passcode from USB Hyper Fido WebAuthn/U2F Security Key or Hardware Token

### Hyper Fido WebAuthn/U2F Security Key

### Hardware Token
